SEEKER · LAUNCH CONTENT PLAN
YOUTUBE · INSTAGRAM · A TEAM OF TWO

Seeker

Launch content plan

One YouTube guide, six Reels and four carousels: what to make, the order it goes out in, what goes into each piece, and how two people film, edit and track it.

- Matches your Spotify playlists to the files you own
- Finds the best copy of what's missing
- Asks you when it isn't sure
- Files it, tags it, never overwrites

1
YouTube guide
≤ 15 minutes, the full manual

6
Reels
≤ 60 seconds each, made for reach

4
Carousels
plus one optional, made to be saved

2
Later waves
Intel Macs (v0.2.0), then Windows (v0.3.0)

For Seeker v0.1.1 · macOS 15 or later on Apple silicon
Prepared 30 October 2026 for Kris, on camera, and the friend behind it

Read it like the Dashboard: do · careful · your call · don't

CONTENTS

What's in here

1 **The message** 04
Problem, promise, proof · who it's for · how it sounds

2 **Ground rules** 06
Requirements · copyright · music · privacy · the demo setup

3 **The order** 08
The calendar, and why it runs this way

4 **Channel setup** 10
YouTube and Instagram on day one

5 **The YouTube guide** 11
Titles, thumbnails, the script chapter by chapter

6 **Six Reels** 16
One storyboarded page each, plus the later waves

7 **Carousels** 24
The infographics, slide by slide

8 **Filming** 27
Setups, light, sound, screen capture, the shot list

9 **Editing in Resolve** 30
Workflow, graphics, colour, sound, captions, export

10 **Script toolkit** 32
Hooks, lines that repeat, answers to the usual questions

11 **Team and tools** 33
The tracker, reviews, files, who does what

12 **Measure and adjust** 35
What to watch, and what to do about it

13 **Beyond the two channels** 36
Your own channels and other people's audiences

A **Specs and brand kit** 37

B **Checklists and sources** 38

How to read it

The plan marks things with the lights Seeker uses on the Dashboard, so they need no legend after this one.

- **Green:** do this; it's the recommendation.
- **Amber:** careful, there's a trap here.
- **Amber ring:** waiting on your decision.
- **Red:** don't; it can cost you the video, the channel or a person's privacy.

Decided on 30 October

- **Kris is on camera**, face and voice: the DJ who built the app.
- **B-roll comes from the home DJ setup.** No club or record shop; the plan stages the booth at home.
- **Launch now, on the Mac.** Intel and Windows each come later as their own wave.
- **Edit in DaVinci Resolve.**

Who reads what

Kris: all of it; start with 1, 2, 3 and 5.

Your friend: 3, then 6 to 9: the creative and craft sections.

Together: 3 (the order), 11 (how you work) and 12 (what you watch).

Already in the repo, ready to use

- `tools/screenshots.py` : every screen and wizard step, light and dark, over invented data. Safe stills for carousels and thumbnails.
- `packaging/fonts/` : Barlow Semi Condensed, the app's title face (OFL).
- `packaging/icons/` : the icon and the brows (`seeker_brows.svg`).
- The Help and Support pages: the voice to match.

SUMMARY

The plan on one page

One guide that teaches everything, short pieces that bring people to it, and an order that never sends anyone to something that isn't live yet.

The goal

In the six weeks after launch, make DJs who plan their sets in Spotify **know Seeker exists**, **see that it works**, and **install it**. Build an audience you can tell when Intel Macs and Windows arrive.

Primary audience: DJs who dig in Spotify and play from files, on a Mac. Everyone else is a bonus until Windows ships.

What success looks like

- **YouTube:** viewers stay past the setup chapters, and search starts bringing new ones.
- **Instagram:** Reels reach non-followers; carousels get saved and shared; profile visits turn into link taps.
- **Seeker:** weekly `.dmg` downloads climb above today's baseline (30 across both releases), with GitHub stars and issues from new users.
- **"Windows?" comments** become evidence for phase 02.

The model: one hub, many roads to it

6 Reels
Reach: shown mostly to people who don't follow you yet. One idea each.

4 carousels
Saves and shares: the manual, page by page.

Stories and Shorts
Conversation, polls, and the same Reels on YouTube.

all point to →

The YouTube guide
≤ 15 minutes · the complete manual
chaptered, so anyone can jump to one feature

↓ which points to

The download
`seekerapp.dev`, your own site: the requirements and the download button, said the same way everywhere.

The order, at a glance

W1	Prepare: scripts, demo setup, channels, graphics kit	2–8 Nov
W2	Shoot day (Sat 14 Nov); screen recordings	9–15 Nov
W3–4	Edit the guide; first Reels and carousels	16–29 Nov
●	**Soft launch** on Instagram: Carousel 1, Reel 1	26–28 Nov
●	**Launch:** the YouTube guide + Reel 2	Tue 1 Dec
W5–8	One Reel and one carousel a week, into gig season	to 23 Dec
○	Waves: Intel Macs, then Windows	on release

Must be true before anything goes out

1 · The requirements are right everywhere
Including **Spotify Premium**: Spotify has required it for developer apps since February 2026, and neither the README nor seekerapp.dev says so yet.

2 · Nothing on screen can hurt anyone
A demo macOS account, a demo Soulseek login, cleared music only, other people's usernames blurred.

3 · The framing is a library tool
"For DJs, who buy what they play." Never "free music".

SECTION 1 · THE MESSAGE

Dig in Spotify. Play from files.

Every piece of content tells one story: the place DJs find music and the place they play it from are different, and Seeker does the bookkeeping in between.

THE PROBLEM

DJs discover and plan sets in Spotify. Spotify has been back inside rekordbox, Serato and djay since September 2025, but **only for personal, non-commercial use**: Spotify's own support page rules out clubs, venues, events and livestreams, and Serato notes there's no offline storage.

A gig needs files. So every playlist gets rebuilt by hand: which of these do I have, where's a good copy of the rest, which folder, are the tags right?

THE PROMISE

Seeker turns your Spotify playlists into a DJ-ready library on your Mac.

It knows what you already own, finds the best copy of what's missing, puts it in the right folder and tags it.

Nothing is overwritten, replaced or deleted without asking. It's free, open source, has no telemetry, and your data stays on your Mac.

THE PROOF, ON SCREEN

- **Matching:** a light on every track.
- **Best copy:** lossless first, then bitrate, then a file you can get now; three backups; upgrades later.
- **Placement:** a folder per playlist; never lands on an existing file.
- **Tags:** artist, title, album, cover art; BPM and Camelot key if you want; "Artist – Title" renames.
- **Duplicates by sound**, not by name.
- **Sharing back**, opt-in.

Say it in 5, 15 and 30 words

LENGTH	LINE	USE IT FOR
5	**Spotify playlists, DJ-ready, on disk.**	Thumbnails, covers, the banner
15	Seeker matches your Spotify playlists against your library, finds what's missing, and tags everything.	Reel captions, the Instagram bio
30	Seeker turns your Spotify playlists into a DJ-ready library on your Mac. It shows what you already own, finds the best copy of what's missing on Soulseek, then files it and tags it. Free.	The first lines of the YouTube description, the channel's About, Reddit

Say "Soulseek" plainly, once

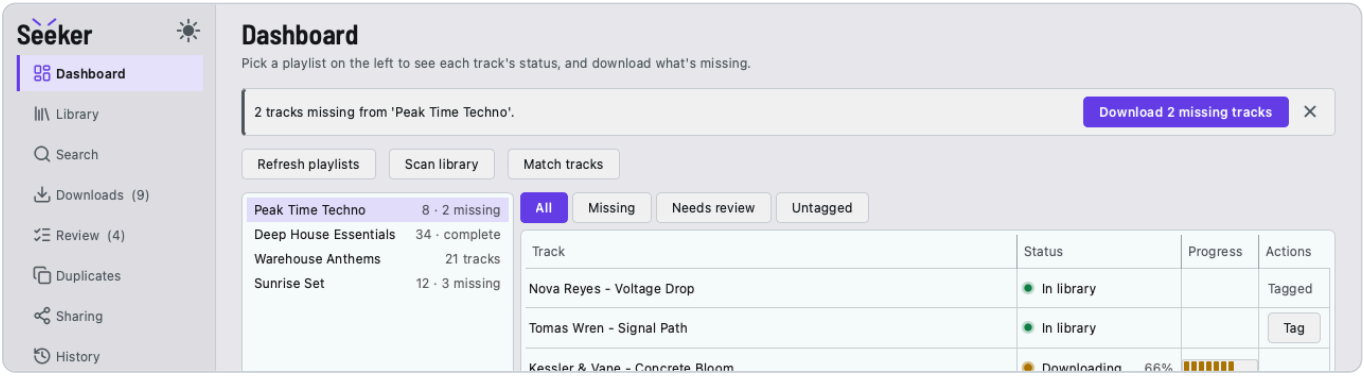

It's honest, and the people searching for it are exactly your audience. Put it in the description and the chapters; keep it out of the title and the thumbnail, where it reads as the whole point.

One tagline, everywhere

Every light green.

Recommended. It's the app's own picture of "done", it works as a spoken sign-off at the end of every video, and it needs no explaining after the first Reel.

Alternatives: "Dig in Spotify. Play from files." (the problem in five words) · "Your playlists, gig-ready." (plain benefit).

The whole promise in one screen: a playlist, a light on every track, and the next step ("Download 2 missing tracks"). Light theme, invented data from the screenshot harness.

Who it's for

PRIMARY

The Spotify-first digger

Plays out regularly: bars, clubs, private events. Finds music through Release Radar, editorial and friends' playlists. Brings a USB stick of files to every gig, and loses an evening before each one rebuilding playlists.

Wants: speed, quality, correct tags.

Hook that lands: "Your set's a Spotify playlist. Your USB stick is empty."

PRIMARY

The bedroom DJ levelling up

Practises at home on a controller with rekordbox or Serato; first gigs are coming. The library is a pile of downloads: duplicates, `track01 (1).mp3`, no artwork.

Wants: a clean, gig-ready library, and to learn how.

Hook that lands: "Your DJ software deserves better than track01 (1).mp3."

SECONDARY

The tinkerer

Comfortable with Docker, self-hosting, slskd; often a developer who DJs. A smaller group, but they star repos, file good issues and post to Reddit and Hacker News.

Wants: control, open source, a CLI, a cron job.

Reach them through the borrowed channels in section 13, not Reels.

How it sounds

A DJ friend who codes: direct, specific, a little dry. Show it; don't hype it.

- **The DJ's words, not the code's:** playlist, crate, USB, gig, tags, set. Repositories and state machines belong only in the origin-story Reel.
- **Every claim is on screen in the same shot.** If you say "it never overwrites", show the file that got a new name instead.
- **Match the app's own copy.** Its Support page calls itself "a statement of fact, not marketing copy". That's the bar.
- **Humour from DJ life** (the 23:47 message from a promoter), never at other DJs' expense.
- **No numbers you haven't measured.** "Saves hours" invites "not for me"; show the time-lapse instead.
- **Never call it AI.** It isn't: fuzzy matching, audio fingerprints and signal analysis. Being precise is part of the credibility.

Words to use, words to avoid

SAY	NEVER SAY
find the missing tracks · the best available copy	free music · download any song for free
your library · your crate · gig-ready	rip · pirate · torrent · "steal this"
Soulseek, the file-sharing network many DJs already use	"the trick labels don't want you to know"
matches · files · tags · finds a better copy	AI · "magic"
free and open source, no telemetry	100 % legal · totally safe
not notarized: macOS asks you to approve it once	unsigned · virus-free
buy what you play · support the artists	"why pay for music?"

Why the care

Platforms and many DJ communities restrict content that looks like it promotes piracy. The same framing that respects artists keeps the channel and its reach safe.

How it's different: for the "why not just…?" comments

vs. doing it by hand

A Soulseek client and a lot of patience work, one track at a time. Seeker remembers what you own across every folder, ranks the copies for you, files and tags them, and keeps looking for what it couldn't find.

vs. command-line downloaders

Scripts that pull a Spotify playlist from Soulseek suit people who live in a terminal. Seeker starts from your library instead: it fetches only what you don't have, asks when it isn't sure, and puts a desktop app and a CLI over the same engine.

vs. Spotify inside your DJ app

Fine for practice at home. A gig needs files on a USB stick, and Spotify's terms keep its DJ integration to personal use. Seeker turns the playlist into two lists: files you have, and files you still need.

SECTION 2 · GROUND RULES

Before you film

Five rules that protect the channel, the people on screen, and the artists whose music Seeker finds. Read them together once; they decide what goes in front of the camera.

What a viewer needs: say it the same way in the video, the description and the bio

- **A Mac with Apple silicon, macOS 15 or later.** Intel Macs come in v0.2.0, Windows in v0.3.0.
- **Spotify Premium and a free Spotify developer app:** its Client ID, with the redirect URI `http://127.0.0.1:8888/callback`.
- **Docker Desktop.** Seeker runs slskd, its Soulseek client, inside it.
- **A Soulseek account:** free; the setup can create one.
- **Optional:** Homebrew and `brew install chromaprint`, for duplicate detection.
- **Premium is new.** Since February 2026 Spotify says "Development Mode use will require a Spotify Premium account", and allows one developer Client ID per person. The README, the wizard and seekerapp.dev don't mention it yet: fix that first (page 07).

1 · Lead with the library, not the downloads

Seeker's job is bookkeeping: what you have, what's missing, where it goes, how it's tagged. Show Soulseek as one way to get the missing tracks and buying them as the other. Everything except downloading works without Soulseek, and the wizard lets you skip it.

2 · Never call it free music

Use the word list on the previous page. The framing protects the channel's reach as much as it respects the artists, and it's the stance the app already takes on its Support page.

3 · Only cleared music on camera

On screen and in the soundtrack: your own productions, friends' tracks with written permission, or Creative Commons tracks whose licence allows it. Never a well-known label release downloading or playing, not even for five seconds: YouTube's Content ID claims the whole video for it, and Instagram mutes it.

4 · License the soundtrack, and log it

The YouTube Audio Library is free for YouTube; Meta's Sound Collection for Instagram; Epidemic Sound, Artlist or Uppbeat cover both on a subscription (check the plan covers both platforms); your own beats cover everything. Log each track and its licence in the tracker. Trending Instagram audio is fine in a Story, not in a promotional Reel.

5 · Spotify is a name, not a logo

Say "works with your Spotify playlists". Keep Spotify's logo out of the profile picture, banner and thumbnails, never imply a partnership, and end the description with "not affiliated with Spotify or Soulseek". If a Spotify logo must appear, follow Spotify's own design guidelines.

And one note

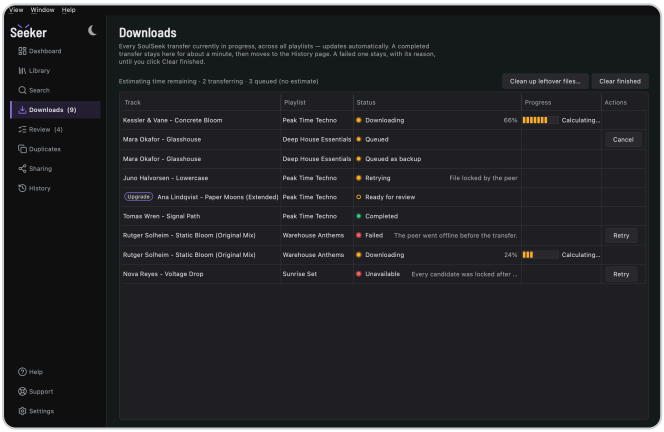

None of this is legal advice, and where the line sits depends on the country. When you're unsure about something in a shot, leave it out of the shot.

Never on camera

- **Settings → Connections:** never click **Show** on the slskd API key or the web password.
- **Other people's usernames:** Search results, Downloads, Review candidates, and Sharing's "who's downloading from you". They're real people: blur them.
- **Your Spotify name and email** (the consent page, the Developer Dashboard) and your **Client ID**: blur.
- **Your real Soulseek username** and password.
- **Paths with your home folder's name**, and folder names that say more than you want.
- **Notifications** (turn on a Focus mode), the bookmarks bar, a crowded Dock or menu bar.
- **Track titles you can't show** (rule 3): crop or blur them.

Stills: use the screenshot harness

`uv run python tools/screenshots.py` writes every screen and wizard step, light and dark, at 1280×820 and 960×640, into `tools/.screens/`. Its data is invented ("Nova Reyes – Voltage Drop", `demo_peer_1`), so it carries no privacy or copyright risk. Use it for carousels, thumbnails, the banner and storyboards.

Downloads, from the harness: invented tracks, invented peers. Every image in this plan comes from it.

The demo setup

1. **A macOS user just for filming** ("Seeker Demo"). Seeker keeps everything per account, so it starts fresh and your real setup is untouched. 🟠 Quit Docker Desktop in your own account first: your round-12 acceptance notes flag that it may hold ports 5030, 5031 and 50300.
2. **Spotify allows one developer app.** Film the "Create app" form, cut before Save, then carry on in your existing app with the Client ID blurred. 🟠 Using it in two installs can sign the other one out (Spotify rotates refresh tokens): afterwards, Settings → Connections → Re-authorize in your own account.
3. **A demo Soulseek username**, made with the wizard's "Create a new SoulSeek account". It films the new-user path and keeps your real name off camera.
4. **A demo crate** of cleared tracks that holds every problem the video needs: a file with no tags or artwork, a `track01 (1).mp3`, one song as FLAC and MP3 under different names (Duplicates), a low-bitrate copy with a better one available (Upgrades), a near-miss title (Review).
5. **Two or three demo playlists** in Spotify from cleared tracks: one mostly owned (lots of green), one mostly missing (the download).
6. **Resetting the wizard between takes:** quit Seeker, stop the demo account's slskd container in Docker Desktop, then delete `~/Library/Application Support/Seeker` **in the demo account only**.

Product to-dos before launch

Small changes in the repo that make every video truer and every viewer more likely to succeed.

- **Spotify Premium** and "one developer app per account" in the README's Install section, the wizard's Spotify step and seekerapp.dev's "What you need".
- **seekerapp.dev:** its download label still says "Latest: v0.1.0"; add the guide as an embedded video, and links to the two new channels.
- **A "Watch the guide" link** at the top of the README once the video is live, and in the next release's notes.
- **Help → "Video guide"** beside "How Seeker works", in the next release.
- **Later, optional:** "Buy" links (Bandcamp, Beatport search) beside missing tracks. It makes "support the artists" one click, and gives the story a stronger ending.

SECTION 3 · THE ORDER

Build the hub, then send people to it

Nothing goes out pointing at something that isn't live yet. The dates are suggestions: if the shoot moves, slide the whole calendar, but keep the sequence.

WORKSTREAM	W1 2–8 Nov	W2 9–15 Nov	W3 16–22 Nov	W4 23–29 Nov	W5 30 Nov–6 Dec	W6 7–13 Dec	W7 14–20 Dec	W8 21–27 Dec	W9 28 Dec–3 Jan	LATER on release
Pre-production scripts, demo setup, channels, graphics kit	prep									
Shoot shoot day Sat 14 Nov; screen recordings		shoot								
Edit the guide assembly → review → colour, sound, captions			edit · review · finish							
Edit Reels and carousels batched, always a week ahead of posting			batch · a week ahead							
Instagram soft launch Carousel 1, Reel 1				C1 · R1						
Launch the YouTube guide + Reel 2					1 Dec					
Weekly drip a Reel and a carousel a week, into gig season					R3–R6 · C2–C5					
Retro 30 minutes: keep, drop, try									retro	
Waves Intel Macs (v0.2.0), then Windows (v0.3.0)										waves

Why this order

1 · Hub before spokes

The guide is live before any Reel says "full guide on YouTube". A dead end on day one wastes the only first impression a Reel gets.

2 · Don't launch to an empty room

Two posts go up the week before, so the first visitors find a profile that already explains itself. They also rehearse your export and upload routine on lower stakes.

3 · The problem before the features

The first Reels sell the outcome: playlist in, gig-ready files out. Later ones each show one feature, to people who by then know what Seeker is.

4 · A person before the product

"I'm a DJ, and I built this because I was sick of doing it by hand" is the trust signal. The origin story goes out first and stays pinned.

5 · Values early

"Buy what you play" goes out in the second week, before the "is this legal?" comments set the tone, so you can answer them with a post.

6 · Ride the season

December is gig season: Christmas parties, New Year's Eve. The last Reel is a night-before-the-gig story, and the optional checklist carousel lands just before NYE.

7 · News comes in waves, not footnotes

Intel Macs and Windows each get a Reel, a guide update and Stories: a reason to post again, and an answer for everyone who asked.

Every upload, in order

#	WHEN	WHERE	PIECE	ITS JOB	CALL TO ACTION
1	Thu 26 Nov	IG	**Carousel 1 · Meet Seeker** PIN	Explain the app to the first visitors	“Full guide on YouTube on 1 Dec. Follow.”
2	Sat 28 Nov	IG	**Reel 1 · The DJ who built it** PIN	Trust: a person and a reason	“Follow for the launch on Tuesday.”
3	**Tue 1 Dec**	YT	**The guide** (≈ 14:45)	The manual; ranks in search for years	“Download link’s in the description.”
4	**Tue 1 Dec**	IG	**Reel 2 · Not for your gig** PIN + a Story with a link sticker	Reach: the problem everyone has	“Full guide: link in bio.”
5	Thu 3 Dec	IG	**Carousel 2 · Read it like a CDJ**	Saves; teaches the lights	“Save it for your first sync.”
6	Sat 5 Dec	IG	**Reel 3 · Every light green**	Shares; a satisfying loop	“Link in bio.”
7	Tue 8 Dec	IG	**Reel 4 · track01 (1).mp3**	Reach to bedroom DJs	“Library chapter in the guide.”
8	Fri 11 Dec	IG	**Carousel 3 · Buy what you play**	Values; answers the piracy question	“Send it to a DJ friend.”
9	Tue 15 Dec	IG	**Reel 5 · Same song, three names**	Curiosity about one feature	“Link in bio.”
10	Fri 18 Dec	IG	**Carousel 4 · How Seeker picks the best copy**	Saves from quality-minded DJs	“Save it.”
11	Mon 21 Dec	IG	**Reel 6 · 23:47, the night before**	The season; a story	“Before NYE: link in bio.”
12	Wed 23 Dec	IG	**Carousel 5 · Gig-ready checklist** OPTIONAL	Saves for NYE prep	“Send it to your b2b partner.”
○	On release	both	**Waves: Intel Macs, then Windows**	News; brings back everyone who asked	See section 6

Every Reel, twice more

Post the same vertical file to **YouTube Shorts** the same day, with its **Related video** set to the guide: Shorts grow the new channel too. **TikTok** is optional; claim the handle now anyway.

When to post

Start with weekday evenings in Central Europe (18:00–20:00 CET), which is lunchtime on the US East Coast, and late mornings at weekends. After two weeks, move to the hours Instagram Insights and YouTube Studio show your viewers are online.

After launch, every week

- 3–5 Stories on posting days (section 6).
- Reply to every comment within a day for the first two weeks.
- Pin the best question, with your answer.
- 15 minutes of numbers on Friday (section 12).

Launch day, hour by hour · Tuesday 1 December

WHEN (CET)	WHO	WHAT
Mon 30 Nov	Both	Upload the guide as **Private** with its thumbnail, chapters, description, captions and end screen; schedule it. Schedule Reel 2. Check every link on a phone.
17:30	Kris	Last check: the video plays, the description’s links work, the pinned comment is ready to paste.
18:00	—	The guide goes public. Post and pin the comment. A Story with a link sticker to the video.
19:00	—	Reel 2 goes live; the same file to YouTube Shorts, its Related video set to the guide.
19:00–21:00	Both	Reply to every comment on both platforms. Send the guide to the DJ friends you’ve told about it.
21:00	Kris	One borrowed channel, after reading its rules (section 13).
Wed 2 Dec	Both	First look at impressions, click-through and retention; a behind-the-scenes Story; keep replying.

SECTION 4 · CHANNEL SETUP

Day one: two channels that explain themselves

Set both up in week 1, before anything is posted. A visitor who lands on either profile should understand in five seconds what Seeker is, who it's for and where the guide is.

Name and handle: the same everywhere

Display name **"Seeker · DJ library app"**: the descriptive half is searchable on both platforms. For the handle, check these in order on YouTube, Instagram and TikTok, and take the first one free on all three:

`@seeker.dj` `@seekerdj` `@getseeker` `@useseeker` `@seekerfordjs`

The link

Reels point to the guide; the guide points to **seekerapp.dev**, your own site, which already has the requirements and the download button. Tag each channel's link (`seekerapp.dev/?ref=youtube`, `?ref=instagram`) so section 12 can tell them apart.

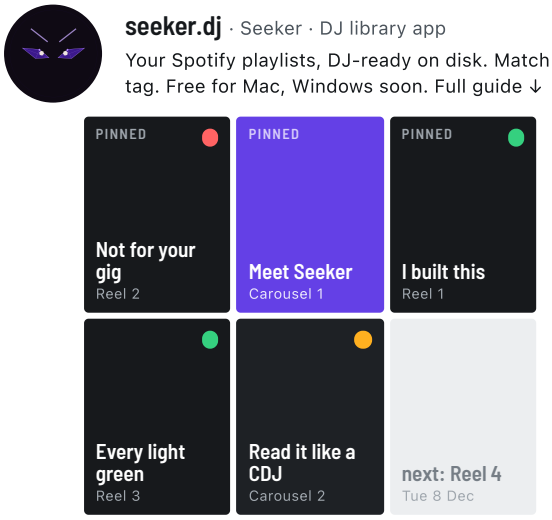

YouTube

- [ ] **Verify the channel by phone on day one.** Custom thumbnails need it, and it unlocks the advanced features (Test & Compare, where YouTube offers it to the channel).
- [ ] **Profile picture:** the icon, 800×800; the eyes are the brand.
- [ ] **Banner:** 2560×1440, with everything that matters inside the central 1546×423: the wordmark, "Spotify playlists, DJ-ready, on disk.", and "macOS · free · open source".
- [ ] **Description:** the 30-word line from section 1, the requirements, and "not affiliated with Spotify or Soulseek".
- [ ] **Links:** seekerapp.dev, GitHub and the Instagram profile; `hello@seekerapp.dev` as the contact address.
- [ ] **Upload defaults:** the description template from section 5, category Science & Technology, language English.
- [ ] **Playlists:** "Seeker guides" (the guide; later the Windows setup) and "Seeker in 60 seconds" (the Shorts).
- [ ] **Channel trailer** for visitors who haven't subscribed: a 16:9 cut of Reel 2, about 40 seconds.
- [ ] **Featured video:** the guide, once it's live.

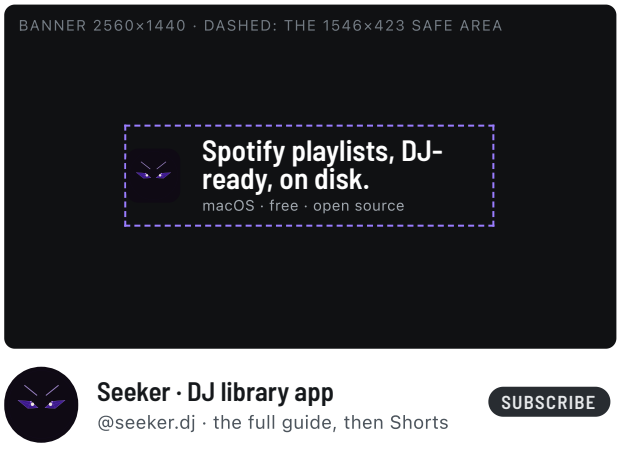

Instagram

- [ ] **A professional account (Creator):** Insights, scheduling, and Trial Reels once the account qualifies. Instagram gates them behind a follower minimum: most 2026 guides say 200 for professional accounts, some say 1,000, so check in the app.
- [ ] **Profile picture:** the icon, centred; it shows as a circle, so keep the eyes in the middle 70 %.
- [ ] **Name field:** "Seeker · DJ library app". It's searchable; the bio isn't, much.
- [ ] **Bio (≤ 150 characters):** "Your Spotify playlists, DJ-ready on disk. Match · find · tag. Free for Mac, Windows soon. Full guide ↓"
- [ ] **Links:** the guide first, then seekerapp.dev, then GitHub (Instagram allows up to five). The contact button: `hello@seekerapp.dev`.
- [ ] **Highlights:** Start here · Setup · FAQ · Updates, with covers of one LED dot on graphite.
- [ ] **Pinned (up to three):** Reel 2, Carousel 1, Reel 1. Swap in your best performer later.
- [ ] **Grid:** alternate Reels and carousels; every cover in one style: graphite, a Barlow title, one LED dot in the same corner.

What visitors will see

Instagram on Sat 5 Dec: three pinned posts, then the newest first. One cover style makes the grid read as one brand.

Only the safe area shows on every device; the rest is decoration for TVs. Keep the words inside the dashed box.

SECTION 5 · THE YOUTUBE GUIDE

Everything, in under fifteen minutes

The manual for anyone who wants to learn Seeker: a beginner can follow it from download to a gig-ready playlist, and someone who's stuck can jump straight to one chapter. Target length 14:45.

Title: three angles to test

A **Turn Spotify Playlists Into a DJ-Ready Library | Seeker Full Guide**
Search and outcome. 🟢 Start with this one.

B **From Spotify Playlist to Gig-Ready USB, Automatically (Seeker Tutorial)**
The concrete picture.

C **I Built the App I Wanted as a DJ: Full Seeker Tutorial**
The story; strongest once the channel has an audience.

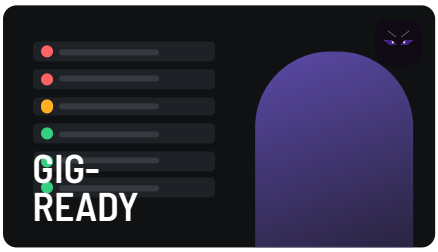

If YouTube Studio offers **Test & Compare** on the channel, run A against B (titles) and the three thumbnails below; it rotates them and keeps the one that earns the most watch time.

Words people search, in the right places

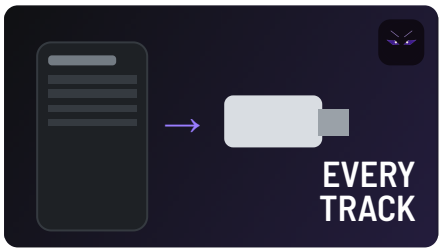

Use them naturally in the description, the chapter names and what you say (YouTube reads the captions): *Spotify playlist to DJ files · rekordbox library · DJ tags and cover art · Soulseek · slskd · duplicate tracks · BPM and key · Mac.*

> **Not in the title**
> "Soulseek" and "download" stay out of the title and thumbnail (section 1): they belong in the chapters, where a searcher finds them in context.

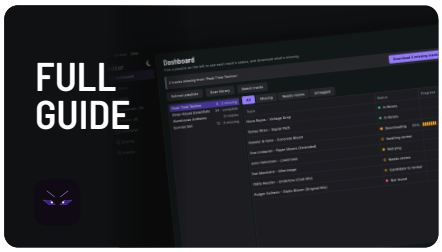

Thumbnails: three concepts

1 · Red to green. Your face on the right (focused, headphones round the neck), a list whose lights go red → green.

2 · Playlist to USB. A playlist card (no Spotify logo), an arrow, a USB stick going into your deck.

3 · The app. The Dashboard tilted, you pointing at it. Clearest for search; least emotional.

Rules for all three: at most three words; readable at phone size (check it at 160 px wide); the Seeker eyes in the same place on every thumbnail you ever make; no Spotify logo. Shoot the face as a still on the shoot day (section 8).

Runtime budget

Open 0:35 | Setup · 3:55 need, install, Spotify, library + Soulseek | The pipeline · 4:00 Dashboard, Review, Download | Beyond the basics · 5:20 upgrades, search, tags, duplicates, sharing, settings, CLI | Wrap 0:55

Pacing: about 150 spoken words a minute, so the whole script is roughly 2,000 words. One idea per sentence. If a chapter runs long, cut words before cutting the picture.

From script to timeline, in five steps

1 · Script
Write it in two columns, picture and words, like the cold open overleaf. Read it aloud and cut what you trip over.

2 · Screen
Record the screen chapter by chapter in the demo account, murmuring the script so the pace matches.

3 · Voice
Record the whole voice-over in one sitting, same mic, same room, same distance: it keeps the sound even.

4 · Camera
The shoot day adds the talking parts and the B-roll the script calls for (section 8).

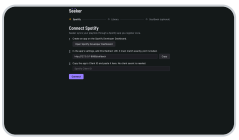

5 · Edit to the voice
Lay the voice down first, then fit the picture to it. Section 9 has the rest.

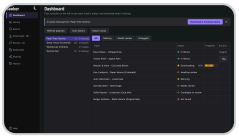

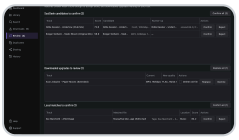

The cold open, 0:00–0:35: show the result first

A draft to read aloud and rewrite in your own words: it promises the whole path in the first half-minute.

TIME	PICTURE	WORDS
0:00	B-roll: a USB stick dropped on the desk beside the controller; your face lit by the screen.	"My set for Saturday lives in a Spotify playlist. My decks can't play that at a gig. They need files."
0:06	Screen: a playlist, 31 green lights and 9 red.	"Seeker looks at the playlist, looks at my library, and shows me exactly what's missing."
0:12	Click "Download 9 missing tracks"; amber meters fill, sped up; the lights turn green.	"One click, and it finds the best copy of each one, lossless if there is one, and files it in the right folder…"
0:21	Library page tagging; Finder's gallery fills with cover art.	"…then tags every file with the right artist, title and artwork."
0:26	You, to camera, at the desk.	"I'm Kris. I DJ, and I built Seeker because I was tired of doing this by hand. It's free. In the next fifteen minutes: everything it does, from install to your first gig-ready playlist."
0:35	Logo sting: the eyes open; your sonic logo.	—

Chapter by chapter

CHAPTER	SAY: THE MAIN POINTS	SHOW, AND WHAT GOES ON SCREEN
00:35 · 0:45 **What you need** 	• A Mac with Apple silicon, macOS 15 or later. • Spotify Premium and a free Spotify developer app: Spotify requires Premium for these since February 2026. • Docker Desktop; a Soulseek account (free; the setup can make one); optionally Homebrew and Chromaprint for duplicates. • Free, open source, no telemetry; your data stays on your Mac. Intel and Windows are coming: subscribe.	SHOW seekerapp.dev's "What you need"; Help → "Where your data lives". ON SCREEN • Requirement chips that tick themselves off. • A badge: "Intel and Windows: coming".
01:20 · 0:45 **Install on macOS**	• **seekerapp.dev** → Download (or GitHub → Releases); drag Seeker to Applications. To verify it: `shasum -a 256 -c Seeker.dmg.sha256`. • The first launch is blocked because Seeker is ad-hoc signed, not notarized: click Done, then System Settings → Privacy & Security → Open Anyway. You do it once. • Control-click → Open no longer works on macOS 15 and later. *Read Me First.txt* on the disk image has the steps.	SHOW seekerapp.dev's Download button, the drag to Applications, the warning, the Open Anyway button. ON SCREEN • Arrow callouts on each click; a "once" badge. • A red callout: "Only download it from seekerapp.dev or GitHub."
02:05 · 1:15 **Connect Spotify** 	• Why an app of your own: Seeker reads *your* playlists with *your* access to Spotify's API. • Open Spotify Developer Dashboard → Create app: a name, a description, the redirect URI (Seeker's Copy button), tick Web API, Save. • The redirect URI must match exactly, port included. No client secret needed. • Premium; one developer app per account (reuse yours); simplest to create it with the account whose playlists you'll sync. • Paste the Client ID → Connect → approve in the browser.	SHOW Wizard step 1 beside the browser; the form filled (cut before Save, section 2); your existing app's settings. ON SCREEN • Blur: the Client ID, your name and email. • A copy → paste highlight between the two windows.
03:20 · 1:10 **Your library, then Soulseek** 	• Choose the folder where your music lives; add more later in Settings → Library. • Soulseek runs through slskd, in Docker: if Docker Desktop isn't installed or running, the step says so. • "I already have a SoulSeek account" or "Create a new SoulSeek account" (pick a new username and password). • Sharing a folder is opt-in. "Set up later" skips it: everything but downloading still works.	SHOW The demo account's new-user path; Set up SoulSeek; the progress; the Done page → Go to Dashboard. ON SCREEN • The status chips, called out as lights. • "Optional" badge; the first image pull, time-lapsed.

CHAPTER	SAY: THE MAIN POINTS	SHOW, AND WHAT GOES ON SCREEN
04:30 · 1:30 **The Dashboard: sync, scan, match** 	• **Refresh playlists** pulls them into a cache on your Mac; a playlist is re-read only when Spotify says it changed. • Pick one to load its tracks. **Scan library** reads your folders; **Match tracks** scores every track against your files. • 90 or more is a match; 70 to 90 waits for you on Review; below that it's missing (Settings → Matching changes both). • The lights: green in library · amber working · amber ring waiting on you · red not found. Filters: All, Missing, Needs review, Untagged. • The banner at the top always names the next step.	SHOW Each button in turn on the mostly-owned demo playlist; then the mostly-missing one. ON SCREEN • The light legend, pinned beside the table for this chapter. • The pipeline tracker lights Sync, Scan, Match (page 15).
06:00 · 0:50 **Review what Seeker wasn't sure of** 	• Three lists: Soulseek candidates, downloaded upgrades, and local matches to confirm. • Confirm, and the match stays confirmed. Reject, and that file is never suggested for that track again. • "Confirm all" does a whole list, after asking.	SHOW A near-miss title from the demo crate: confirm one, reject one. ON SCREEN • The score, circled. • An amber callout: "Reject means never again, for this track."
06:50 · 1:40 **Download what's missing** 	• "Download N missing tracks", then choose where they go: a library folder and a subfolder; tick to remember it. • How it picks: lossless (FLAC, WAV, AIFF) beats MP3 and M4A; then bitrate; then a file you can get now (not locked, shorter queue). Only formats DJ software reads. • Three backups wait behind each pick and take over if it fails. • Downloads: Queued, Downloading, Retrying, Failed with its reason; Retry, Cancel, Clear finished; "Clean up leftover files…" lists before it deletes. • Finished files move into the playlist's folder, get matched, and never overwrite anything. Quit Seeker and slskd keeps going; Seeker files them next time.	SHOW The destination dialog; the Downloads page through a full run; the file arriving in Finder. ON SCREEN • A ranking ladder graphic (lossless → bitrate → available). • "Sped up ×20" badge on the wait; blur the peers' names. • A line: peers come and go, so queues are unpredictable.
08:30 · 0:35 **Upgrades: a better copy, later**	• When only a weaker copy was available, Seeker keeps the better one in mind and fetches it when it can. • It waits on Review → "Downloaded upgrades": current quality beside the new one; Replace or Decline, "Delete old file" if you want. Nothing is replaced without asking.	SHOW The Upgrade badge on Downloads; Review's upgrade row (MP3 192k → FLAC). ON SCREEN Quality before → after, as two chips.
09:05 · 0:25 **Search for any track**	• For a track in no playlist: artist and title, ranked the same way, and the best one lands in the default destination's *Manual* folder.	SHOW One search, one download. Plant the Reel 6 story here: "for that 23:47 request".

The chapter list, ready to paste

```
00:00 Spotify playlist → gig-ready files
00:35 What you need
01:20 Install on macOS
02:05 Connect Spotify
03:20 Your library, then Soulseek
04:30 The Dashboard: sync, scan, match
06:00 Review what Seeker wasn't sure of
06:50 Download what's missing
08:30 Upgrades: a better copy, later
09:05 Search for any track
09:30 Tags, BPM and key, art, file names
10:55 Find duplicates by sound
11:50 Share back, support the artists
12:35 Settings, daily sweep, menu bar
13:30 The command line
13:50 Recap
```

Why chapters matter here

Chapters turn one long video into sixteen findable answers: they show up as "key moments" in Google and YouTube search, and a viewer stuck on one step skips straight to it instead of leaving.

Fix the timestamps only after picture lock: every edit after that shifts them. Name each chapter the way a person would search for it ("Connect Spotify"), not the way the app labels it.

> **Same words, same order**
>
> Use these exact chapter names on the chapter cards in the video, in the description, and as the Reel captions' "chapter in the guide" pointers.

CHAPTER	SAY: THE MAIN POINTS	SHOW, AND WHAT GOES ON SCREEN
09:30 · 1:25 **Tags, BPM and key, art, file names** 	• Library page: pick the playlist (or keep the Dashboard's). **Tag playlist** writes Spotify's artist, title, album and cover art into the files. • **Analyze audio** adds BPM, from beat tracking with an expected range to fix half- and double-time, and the key in Camelot notation (8A). • **Fix missing cover art** repairs art alone. **Rename** makes "Artist – Title", after a preview you confirm. • Your DJ software reads all of it when it imports the files.	SHOW The `track01 (1).mp3` from the demo crate before and after; Finder's gallery view; an import into your DJ software (with no audio playing). ON SCREEN • A before/after split with a wipe. • "8A" popping out with a small Camelot wheel.
10:55 · 0:55 **Find duplicates by sound** 	• Needs Chromaprint: `brew install chromaprint`. • Pick a library location (or just some of its folders) → Compute fingerprints → Find duplicates. • It compares the audio, not the names; each group shows similarity and quality, and suggests the copy to keep. • Nothing is deleted until you tick Confirm delete and press Delete.	SHOW The FLAC and MP3 pair from the demo crate; the "You've reclaimed…" line. ON SCREEN • A fingerprint morphing into a waveform (Reel 5 reuses it).
11:50 · 0:45 **Share back, support the artists** 	• Soulseek works because people share. Sharing shows what your slskd shares and who's downloading from you; adding a folder is opt-in. • The Support page says it best: Seeker pays the people who made the music nothing. You can: buy what you play, go to the shows, credit the artist.	SHOW Sharing with the usernames blurred; the Support page, read from the screen. ON SCREEN A quote card: "Every set you play is built on someone's late nights in the studio."
12:35 · 0:55 **Settings, daily sweep, menu bar** 	• Light, dark or follow the system. Notifications for finished downloads, decisions and errors. • The **daily sweep** searches again for tracks still missing, up to 50 a day; it's off until you turn it on. • Start at login, hidden in the menu bar if you like. The update check is opt-in and never installs anything itself. • History lists what was downloaded and tagged recently.	SHOW General, Library (default destination), Matching; the menu-bar icon; History. ON SCREEN 🔴 Connections tab: never press Show.
13:30 · 0:20 **The command line**	• The same engine, from a source checkout: `uv run seeker sync`, `library scan --match`, `download "<playlist>"`. `downloads status` never prompts, so it's safe to schedule. Everything is in `docs/cli.md`.	SHOW A terminal, big font, four commands.
13:50 · 0:35 + 0:20 **Recap, then the end screen**	• The six steps once more: sync, scan, match, find, file, tag. Intel Macs are next, then Windows: subscribe, and follow on Instagram. Links in the description. "Buy what you play. Every light green."	SHOW You to camera; the pipeline graphic fully lit; 20 s of end screen.

When Seeker changes

Link the playlist, not the video
Point the README, the bio and the Help page at the "Seeker guides" playlist. If you ever re-record the guide, every link still lands in the right place.

Small changes: follow-ups
YouTube Studio's editor can trim and blur, but it can't add. A new feature gets its own short video, linked from a card at the right chapter and from the description.

Keep the project
Archive the Resolve project, the graphics kit and the voice-over. The Windows video reuses most of the guide's graphics, and the install chapter is the only part that changes.

Keep people watching

- **The result first, then the path.** The cold open shows the finished playlist and promises the way there.
- **A pipeline tracker** in the top-right corner: six dots (Sync · Scan · Match · Find · File · Tag) that light green as each chapter finishes. It's the app's own language, and a progress bar for the viewer.
- **Change the picture every 5 to 10 seconds:** a punch-in, B-roll, a callout, a cut to you.
- **Punch in on every part of the UI you talk about** (150 % or more). Most viewers watch on a phone, where a 1280-pixel window is unreadable.
- **Cut every wait**, and label the time-lapse "sped up". It's honest, and it heads off "it was slow for me".
- **Open a loop early:** "and the upgrade trick is in chapter 8."
- **Chapter cards**, two seconds each: the title in Barlow on graphite, the brows above the number.
- **Ask for the subscribe after you've helped**, around 7:00, not in the first minute.
- **Talk to one person:** "you", never "you guys".

The graphics kit (build once, reuse everywhere)

Lower third	"Kris · DJ, built Seeker", a lit LED
Chapter card	number, title, brows
Callout	a rounded box, an LED dot, 2 to 5 words, a leader line
Pipeline tracker	six dots, animated on
Chips and badges	requirements, "sped up ×20", quality before → after
Blur preset	for usernames, IDs and emails, tracked to the screen
Logo sting	the eyes open (1.2 s) with your sonic logo
End card	the layout for YouTube's end-screen elements

The description

```
Seeker turns your Spotify playlists into a DJ-ready
library on your Mac: it matches what you already own,
finds the best copy of what's missing on Soulseek,
files it and tags it. Free and open source.

⬇ Download (macOS 15+, Apple silicon):
seekerapp.dev/?ref=youtube
Source: github.com/KristiyanDDimitrov/Seeker

What you need
• Spotify Premium + a free Spotify developer app
• Docker Desktop and a Soulseek account (free)
• Optional: Homebrew + brew install chromaprint

Chapters
00:00 Spotify playlist → gig-ready files
00:35 What you need
01:20 Install on macOS
… the full list is on page 13

Seeker helps you find music; it pays the people who
made it nothing. You can: buy what you play.

Seeker is independent and not affiliated with Spotify
or Soulseek. What you download and share is your call
and your responsibility.
```

One line per paragraph, as YouTube expects: it wraps them itself.

Pinned comment

"Stuck on setup? The three usual snags: **1)** macOS blocks the first launch: System Settings → Privacy & Security → Open Anyway. **2)** Spotify won't connect: the redirect URI must be exactly http://127.0.0.1:8888/callback, and the account needs Premium. **3)** Soulseek won't start: is Docker Desktop running? Ask below; I read every comment."

Before it goes public

- [ ] Chapters: start at 00:00, at least three, each ten seconds or longer.
- [ ] Captions: upload the `.srt` and proofread the names (Seeker, slskd, Soulseek, Camelot, rekordbox).
- [ ] End screen: subscribe and the Shorts playlist; a card to the Windows video once it exists.
- [ ] Made for kids: no. Music and its licence logged in the tracker.
- [ ] Publish rather than Premiere: a premiere needs an audience you don't have yet.

SECTION 6 · SIX REELS

One idea each, made for strangers

Reels exist for reach: Instagram shows them mostly to people who don't follow you yet. Each one makes a single point in under a minute, and sends the curious to the guide.

#	REEL	LENGTH	FORMAT	THE ONE POINT	GOES UP
1	**The DJ who built it**	45–55 s	Talking head + build montage	A real DJ made this, for a real problem	Sat 28 Nov
2	**Not for your gig**	30–40 s	Problem → solution	Spotify can't go to the gig; files can	Tue 1 Dec
3	**Every light green**	15–20 s	Satisfying loop, no talking	Watch a playlist complete itself	Sat 5 Dec
4	**track01 (1).mp3**	25–35 s	Before / after	Tags, art, BPM and key, clean names	Tue 8 Dec
5	**Same song, three names**	20–30 s	Reveal	Duplicates found by sound	Tue 15 Dec
6	**23:47, the night before**	35–50 s	Story skit	Search rescues a late request	Mon 21 Dec

Rules of the format

1 · The first second decides

Start mid-action (a face, a hand, a moving screen) with words on screen. Never a logo intro.

2 · Built for sound off

Every key line is also on-screen text; captions are burned in.

3 · One idea per Reel

Everything else is in the guide, which is where you want them anyway.

4 · Mind the safe zone

1080×1920; Instagram's buttons and caption cover the edges (diagram, right).

5 · Loop it

Make the last frame lead back into the first: replays count as watch time.

6 · Your own audio

Your voice over a beat you own or license. Trending sounds are for Stories.

7 · Searchable captions

Say "DJ", "Spotify playlist", "rekordbox", "DJ library" in plain words, plus three to five specific hashtags.

8 · A cover for the grid

The grid crops covers to 3:4: keep the title in the middle band.

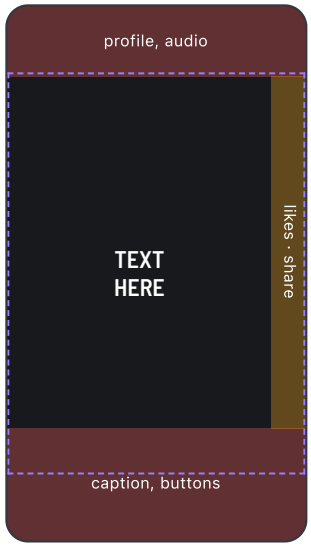

9 · Export clean

Straight from Resolve, never re-downloaded from another app with its watermark. The same file goes to Shorts.

10 · Test hooks with Trial Reels

Once the account qualifies, post a second hook as a trial, shown only to non-followers, and keep the winner.

Safe zone

At 1080×1920: keep about 250 px clear at the top, 400 px at the bottom and 120 px on the right. Dashed: the 3:4 crop the profile grid shows.

REEL 1 OF 6 · GOES UP SAT 28 NOV · PINNED

The DJ who built it

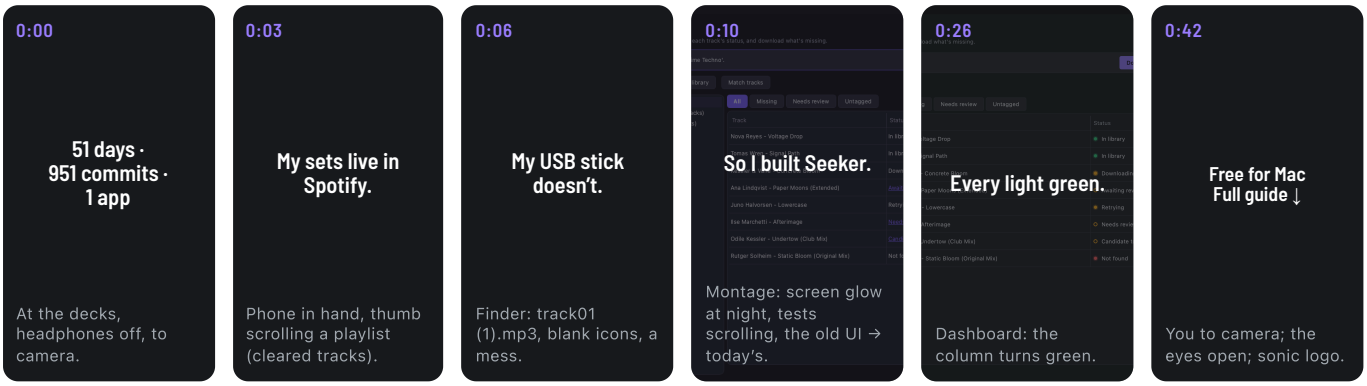

45–55 S · TALKING HEAD + MONTAGE · JOB: TRUST

Why Seeker exists, in under a minute, with the build montage as the payoff. It goes out first because a person and a reason make every later Reel more believable.

THE FIRST SECOND

“51 days. 951 commits. One app for DJs.”

At the decks, you pull your headphones off and turn to camera: “I spent 51 days building the app I wanted as a DJ.”

Beats and lines

0:00	(to camera) “I spent 51 days building the app I wanted as a DJ.”
0:03	“My sets live in Spotify playlists. My USB stick doesn’t. Rebuilding every playlist by hand was eating my weekends.”
0:10	“So I built Seeker.” Then no words: the montage, cut on the beat, a commit counter rolling 0 → 951.
0:26	“It checks what I already own, finds the best copy of what’s missing, files it and tags it.”
0:42	“It’s free. The full guide’s on YouTube: link in bio.” Logo sting.

Shots

- A-roll at the decks, wide and close; two takes of every line.
- The phone playlist, top-down; the messy Finder, staged in the demo account.
- Your face in screen glow at night; a macro of hands on the keys.
- The real test suite running (`uv run pytest -q`: 2,400+ dots) and `git log --graph`.
- The old Dashboard (`docs/design/visual-direction/current-dashboard-dark.png`) dissolving into today’s.

Edit and sound

- Cut the montage on every beat, 2–4 frames per cut in the fastest bar; speed-ramp out into the Dashboard.
- Kinetic numbers in Barlow (51 · 951 · 2,400+). Your own beat if you produce; otherwise a licensed track.

CAPTION

I DJ, and I write code. Rebuilding every Spotify playlist as files before a gig was eating my weekends, so I built Seeker: it checks what you already own, finds what’s missing, files it and tags it. Free for Mac. The full guide is on YouTube (link in bio).

COVER · HASHTAGS

You at the decks, “I built this” in Barlow, a green LED top right.

#djlife #djtools #rekordbox #buildinpublic #djsetup

Numbers from the 18 October interview reference: re-check them the day you post.

SECOND HOOK · FOR A TRIAL REEL OR A RE-POST

“I’m a DJ. I couldn’t find the app I wanted, so I wrote it.”

REEL 2 OF 6 · GOES UP TUE 1 DEC, WITH THE GUIDE · PINNED

Not for your gig

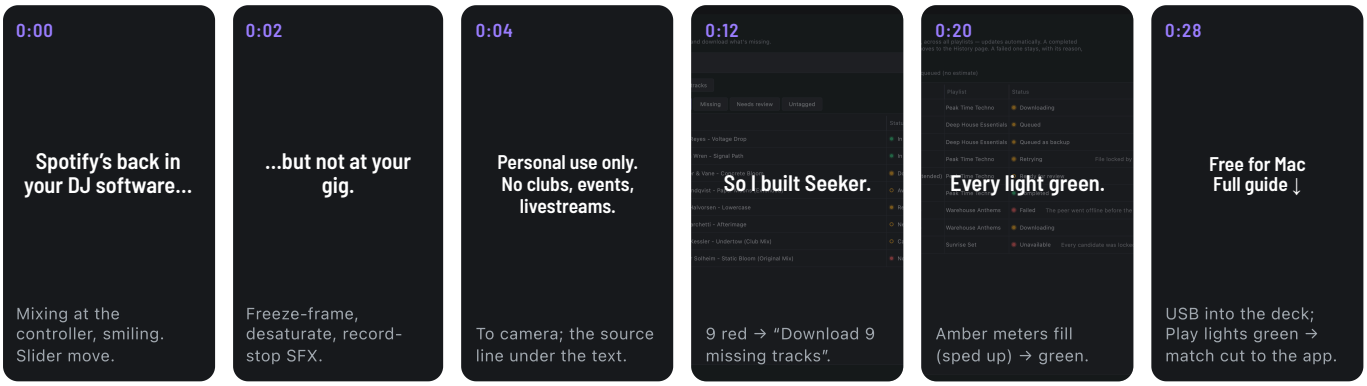

30-40 S · PROBLEM → SOLUTION · JOB: REACH

The core problem in one twist: Spotify is back inside DJ software, but it isn't allowed at the gig. This is the launch Reel and the channel trailer.

THE FIRST SECOND

"Spotify's back in your DJ software..."

You're mixing, all smiles; at 0:02 the picture freezes on a record-stop sound effect: "...but you can't play it at your gig."

Beats and lines

0:00	(mixing) On screen: "Spotify's back in your DJ software..."
0:02	(freeze) "...but you can't play it at your gig."
0:04	"Spotify's DJ integration is licensed for personal use: no clubs, no events, no livestreams. And club decks play files from a USB stick."
0:12	"So I built Seeker. It reads the playlist, checks what you already own, and gets the rest: best copy, right folder, tagged."
0:24	(USB in, press Play) "Every light green."
0:32	"Free for Mac. The full guide's on YouTube: link in bio."

Quote Spotify exactly

Say only what Spotify's support page says (personal, non-commercial; no clubs, venues, events or livestreams) and put the source on screen. Don't claim anything about what downloaded files are licensed for.

Shots

- A wide of the set-up mid-mix, on a slider; hands on the jog wheel.
- A close-up to camera for the explanation.
- Macros at 50 fps: the USB stick going in; the Play button lighting green.
- Screen: Dashboard, Downloads, Finder with the artwork.

Edit and sound

- The freeze: hold the frame, desaturate over 4 frames, a record-stop sound effect (an effect, not a song).
- On-screen source line: "Spotify Support: Using Spotify with DJ software".
- The match cut: the deck's green Play LED → Seeker's green light, same position in frame.
- Captions word by word; a 16:9 version (about 40 s) becomes the channel trailer.

CAPTION

Spotify's DJ integration is for personal, non-commercial use, so your gig still needs files. Seeker turns your Spotify playlists into a tagged, DJ-ready library on your Mac: it checks what you have, finds what's missing and files it. Full guide on YouTube (link in bio). Support the artists you play.

COVER · HASHTAGS

"NOT FOR YOUR GIG" over you at the decks, a red LED.

#djtips #rekordbox #serato #djlife #spotifyplaylist

SECOND HOOK · FOR A TRIAL REEL OR A RE-POST

"Your set's a Spotify playlist. Your USB stick is empty."

REEL 3 OF 6 · GOES UP SAT 5 DEC

Every light green

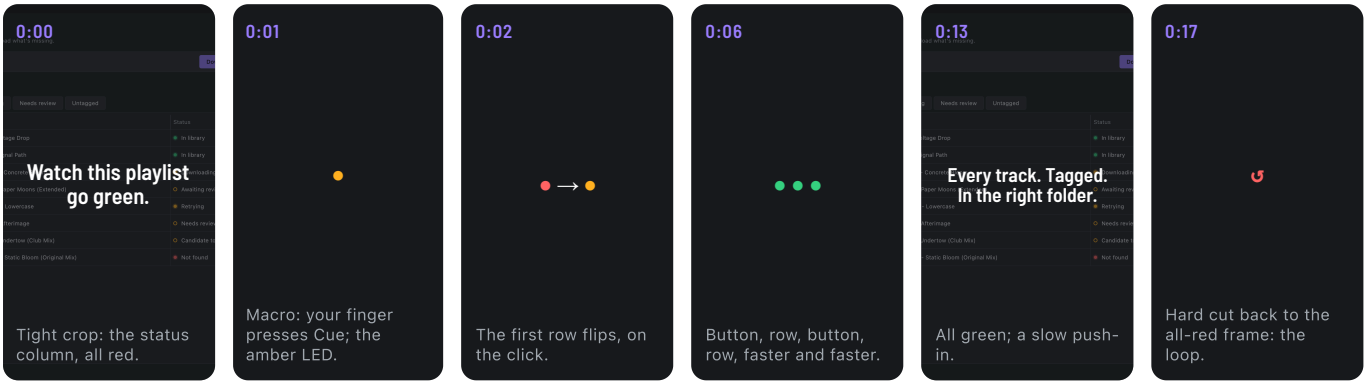

15–20 S · SATISFYING LOOP · NO TALKING · JOB: SHARES

Pure satisfaction: a red column turns green row by row, each change landing on the click of a real cue button. No voice, no explanation, built to loop and to be sent to a friend.

THE FIRST SECOND

“Watch this playlist go green.”

The opening frame is already the problem: a tight crop on a status column that’s all red.

Beats

0:00	Text over the red column.
0:01	Each row: red → amber → green, every change on a cue click; cut between the screen and the button; accelerate.
0:12	All green. Hold. “Every track. Tagged. In the right folder.”
0:16	Cut to the opening frame.

Shots

- A real screen recording of a full run on the mostly-missing demo playlist; time-lapse it.
- Macros of the controller’s Cue and Play buttons at 50 fps, in a dark room so the LEDs glow; a few frames of the jog wheel.

Edit and sound

- **Foley is the soundtrack:** record your own button clicks with a mic close to the controller, layered over a minimal beat. Nobody else has that sound.
- Speed ramps; the rhythm accelerates into the final hold.
- A small “sped up” badge in a corner: honest, since real downloads take minutes, depending on who’s sharing.
- No captions needed beyond the two text cards; keep the cards inside the safe zone.

Make two

Cut a second version at 9 s for the Story and Shorts audience, where shorter loops replay more.

CAPTION

Red: missing. Amber: on its way. Green: in your library, tagged, in the right folder. That’s the whole job. (Sped up: real downloads take minutes, depending on who’s sharing.) Free for Mac: link in bio.

COVER · HASHTAGS

A split frame: the red column beside the green one.

#djsetup #djlife #oddlysatisfying #musiclibrary

SECOND HOOK · FOR A TRIAL REEL OR A RE-POST

“One button, then go and make a coffee.” (open on the click, end on all green)

REEL 4 OF 6 · GOES UP TUE 8 DEC

track01 (1).mp3

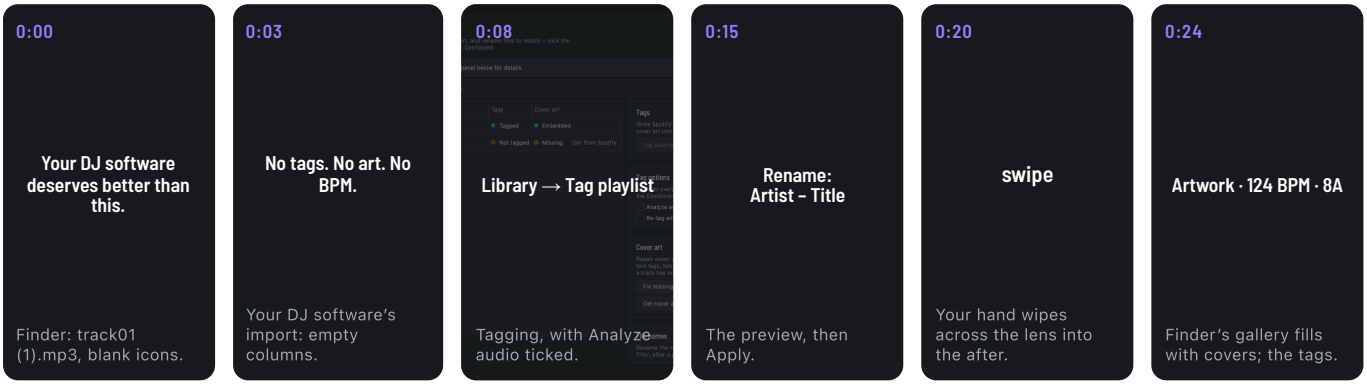

25–35 S · BEFORE / AFTER · JOB: REACH BEDROOM DJS

The mess every library has, fixed on screen: names, tags, artwork, BPM and key. The before is relatable, and the after is the reason to save the Reel.

THE FIRST SECOND

“Your DJ software deserves better than this.”

Finder, close: track01 (1).mp3, audio_final_v2.mp3, blank icons where the artwork should be.

Beats and lines

0:00	(voice-over) “This is what most libraries look like.”
0:03	“No tags, no artwork, no BPM, no key. Your DJ software can’t sort any of it.”
0:08	“Seeker tags it with Spotify’s artist, title, album and cover art, detects BPM and key, and renames it, after showing you a preview.”
0:18	(the swipe) “Artist, title. Artwork. 124 BPM. 8A.”
0:26	“Free for Mac. The Library chapter’s in the guide: link in bio.”

Shots

- The demo crate’s messy files in Finder; your DJ software importing them, with no audio playing.
- The Library page through Tag, Analyze audio and Rename.
- The hand swipe: close to the lens, fast, in the same light as the desk shots.
- Finder’s gallery view after; a Get Info on one file.

Edit and sound

- A split-screen before/after with the wipe on the beat; the swipe as the practical transition.
- “8A” pops out with a small Camelot wheel; zoom on each tag as it’s named.

CAPTION

Seeker writes Spotify’s artist, title, album and cover art into your files, can detect BPM and key (Camelot), and renames them “Artist – Title” after a preview. Your DJ software reads it all on import. Free for Mac: link in bio.

COVER · HASHTAGS

“track01 (1).mp3”, struck through.
#rekordbox #djtips #musiclibrary #djlife #serato

SECOND HOOK · FOR A TRIAL REEL OR A RE-POST

“What your DJ software sees, and what it should see.” (a split screen from the first frame)

REEL 5 OF 6 · GOES UP TUE 15 DEC

Same song, three names

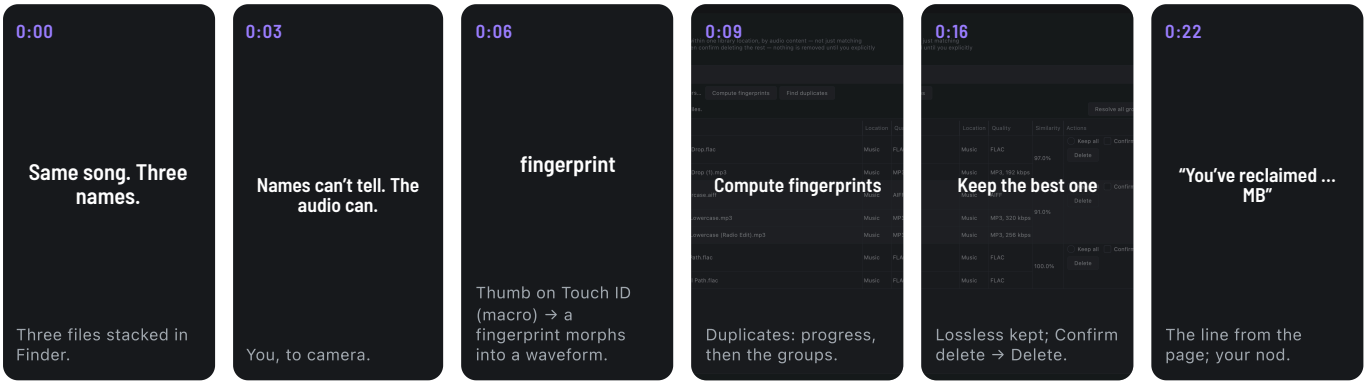

20–30 S · REVEAL · JOB: CURIOSITY

Duplicates hide behind different file names. Seeker listens instead of reading, and a cheeky Touch ID gag makes “fingerprint” visual.

THE FIRST SECOND

“Same song. Three names.”

Three files stacked in Finder: Lowercase.aiff · Juno Halvorsen - Lowercase.mp3 · lowercase_final (1).mp3.

Beats and lines

0:00	(voice-over) “Same song. Three names. Your library’s full of these.”
0:03	(to camera) “File names can’t tell. The audio can.”
0:06	(Touch ID gag) “So Seeker fingerprints the sound itself…”
0:09	“…groups the copies, and suggests the best one to keep.”
0:18	“Nothing’s deleted until you tick the box.” (tick, Delete, the reclaimed line)
0:24	“Free for Mac: link in bio.”

Shots

- The demo crate’s FLAC and MP3 pairs, with deliberately different names.
- The Touch ID macro: a thumb, a soft light, a click.
- The Duplicates page from Compute fingerprints to Delete; your reaction.

Edit and sound

- The fingerprint → waveform animation from the guide’s kit (Fusion).
- A counter rolling up the megabytes reclaimed; a soft click on the tick box.
- Use your demo crate’s real number, not the harness’s 173.6 MB.

Say what it needs

Duplicates need Chromaprint from Homebrew. Say so in the caption so nobody feels tricked.

CAPTION

Seeker compares the audio itself (Chromaprint fingerprints), not the file names: it groups the copies and lets you keep the best one. Nothing is deleted until you tick the box. Needs Homebrew’s chromaprint; the guide shows how (link in bio).

COVER · HASHTAGS

Three file names, two of them crossed out.
#djlibrary #rekordbox #djtips #djlife

SECOND HOOK · FOR A TRIAL REEL OR A RE-POST

“I had N copies of songs I already owned.” (with your demo crate’s real number)

REEL 6 OF 6 · GOES UP MON 21 DEC

23:47, the night before

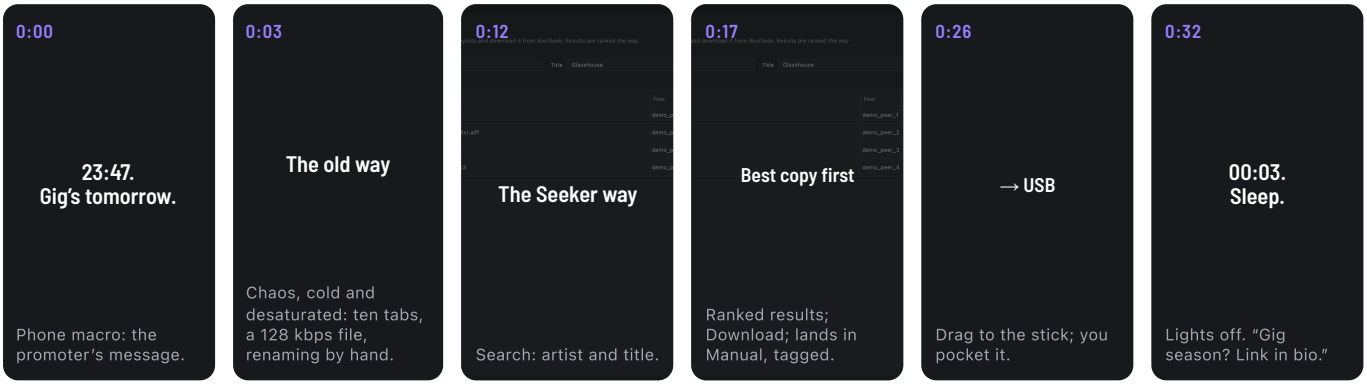

35–50 S · STORY SKIT · JOB: THE SEASON

A promoter's late request the night before a gig: the old way against Search. Every DJ has had this message, which is what makes it shareable in party season.

THE FIRST SECOND

"23:47. Gig's tomorrow."

Phone macro: a message from "Promoter": "can u play [track] tmrw?? 🙏". You sigh.

Beats and lines

0:00	The message lands. A sigh.
0:03	The old way: no words, a ticking clock, fast jump cuts.
0:12	(voice-over, calm) "Search finds a track that isn't in any playlist, ranks the copies, and files the best one, tagged."
0:24	Drag to the USB stick; pocket it.
0:32	"00:03. Sleep." Then: "Gig season? Get your playlists ready: link in bio."

Use a cleared track's name

The name in the message also appears in Search, so make it your own track or a friend's, with permission.

Shots

- The message: a real chat between you two, the contact renamed "Promoter".
- A dim room lit by one desk lamp and the screen; a clock, on the wall or the phone.
- The old-way montage, staged: browser tabs with nothing real on them, a facepalm.
- Search in the demo account; the USB stick; your hand on the light switch.

Edit and sound

- Two grades: the old way cold and desaturated, the Seeker way warm amber.
- A ticking clock that resolves into a calm beat; a clock graphic jumping 23:47 → 00:03.
- Jump cuts for the chaos; one smooth push-in for the calm.

CAPTION

Night-before-the-gig requests hit different. Search finds a track that isn't in any playlist, picks the best copy and files it, tagged. Gig season, sorted. Free for Mac: link in bio.

COVER · HASHTAGS

The phone and its message, "23:47".
#djlife #nye #djtips #gigprep #rekordbox

SECOND HOOK · FOR A TRIAL REEL OR A RE-POST

"Every DJ has had this message." (open on the phone, no sigh)

The later waves

WAVE 2 · V0.2.0

Intel Macs

Reel: "Now on Intel Macs" (10–15 s). An older Intel MacBook slides into frame beside yours; the same playlist goes green on both. On screen: "Seeker now runs on Intel Macs."

- **YouTube:** a Community post; update the guide's description, pinned comment and requirement chips. The app is the same, so no new long video.
- **Instagram:** Stories into the Updates Highlight; reply to everyone who asked.

WAVE 3 · V0.3.0

Windows

Reel: "Same app. Windows." (20–30 s). The Mac and a Windows laptop side by side: the same playlist, the same lights.

- **YouTube:** a short "Seeker on Windows: install and setup" (3–5 min): the installer and Windows' first-run warning (the installer is unsigned), Docker Desktop on Windows, the wizard. Link it from the guide's description and a card at the install chapter.
- **Instagram:** a carousel, "Seeker on Windows: what you need".
- Your Story polls ("Mac or Windows?") tell you how hard to push.

Stories: the conversation between posts

Stories go to people who already follow you. They're cheap to make: phone footage is fine, and trending sounds are fine here.

- **Behind the scenes** from the shoot: lights going up, bloopers, the decks.
- **Polls:** "Mac or Windows?" · "rekordbox, Serato or Traktor?" · "Your library's biggest mess?" The answers are your roadmap and your next Reel.
- **A question box:** "Ask me anything about Seeker". Answers become the FAQ Highlight and Short ideas.
- **A tip a week:** one setting, one screenshot (the daily sweep, start at login, the menu bar).
- **Launch week:** a countdown sticker from Thursday, then a link sticker to the guide on Tuesday.

More from what you already have

- **Shorts from the guide:** chapters 7 (how it picks the best copy), 10 (tags) and 11 (duplicates) each cut into a 45-second vertical clip. Instant extra Shorts, no new filming.
- **Two hooks per Reel:** film two openings for Reels 2 and 4 on the shoot day. Post one; keep the other for a Trial Reel or a re-post a month later.
- **Comments into content:** the third time someone asks the same thing, answer it in a 20-second Reel and pin it to the FAQ Highlight.
- **Repost the best Reel** after six weeks with a new hook. New followers haven't seen it, and the algorithm treats the new hook as a new Reel.

Highlights to set up on day one

Start here (Reel 2 and Carousel 1) · Setup (requirements, Gatekeeper, the Spotify app) · FAQ · Updates.

The mix: five content pillars

Every piece belongs to one pillar. Keep promotion to the guide's calls to action: a feed that only sells stops being shown.

PILLAR	WHAT IT IS	PIECES IN THIS PLAN	SHARE OF POSTS
Show it working	The app doing one job on screen, start to finish	Reels 3, 4, 5	about 35 %
Teach	Reference people save and come back to	The guide; Carousels 1, 2, 4, 5	about 30 %
Story	The people and the DJ life around the app	Reels 1 and 6; most Stories	about 20 %
Values	The artists and the network Seeker depends on	Carousel 3; the guide's sharing chapter	about 10 %
News	Releases and what changed	The Intel and Windows waves	about 5 %

SECTION 7 · CAROUSELS

The manual, page by page

Reels win strangers; carousels win saves and shares, which Instagram reads as “this is useful”. Each one is a page from the guide, laid out in Seeker’s own look, made to be kept and sent on.

Design rules

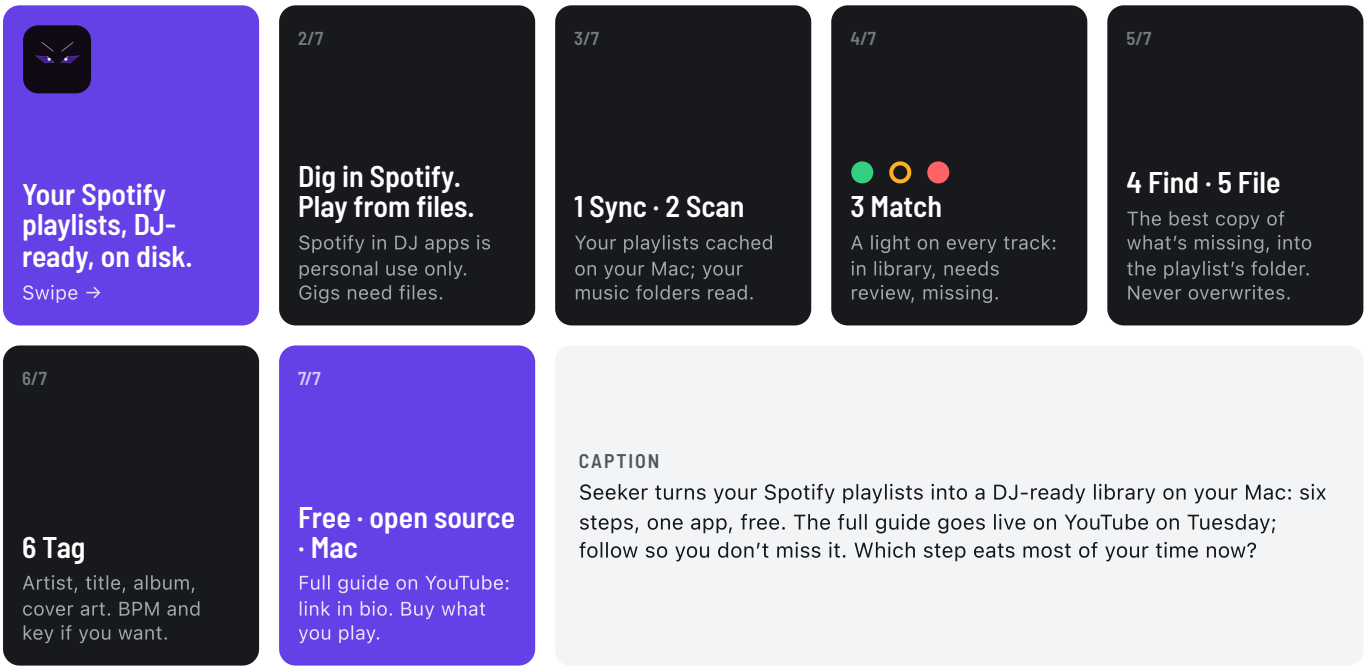

- **1080×1350 (4:5)** slides. Instagram allows up to 20; aim for 6 to 8.
- **Slide 1 is a hook** (a promise or a question), the last slide a call to action.
- **One idea a slide, 25 words at most.** Titles at least 80 px tall and body text 36 px, at 1080 wide.
- **The grid crops to 3:4:** keep slide 1’s title in the middle band.
- **Seeker’s look:** graphite ground, one violet accent, LED dots as bullets, Barlow Semi Condensed titles (Appendix A).

How to make them

- **One master file** in Figma (free) or Canva: 1080×1350 frames, an 80 px margin, the text styles, the colours. Duplicate it for each carousel.
- **Screens from the harness** (invented data), cropped to the part that matters, never a whole window.
- **Export PNG**; add alt text to each slide (Advanced settings) for accessibility and search.
- **Caption:** the first line repeats the hook; end with a question that’s easy to answer.
- **Your friend designs, Kris checks the facts:** every claim on a slide must match the app.

Carousel 1 · Meet Seeker

7 SLIDES · THU 26 NOV · PINNED · JOB: EXPLAIN

CAPTION

Seeker turns your Spotify playlists into a DJ-ready library on your Mac: six steps, one app, free. The full guide goes live on YouTube on Tuesday; follow so you don’t miss it. Which step eats most of your time now?

Carousel 2 · Read it like a CDJ

6 SLIDES · THU 3 DEC · JOB: SAVES

Seeker's lights come from the DJ booth (design doc: "Booth"): lit for settled or working, a ring for waiting on you. Teaching them makes every later Reel easier to read.

What every light in Seeker means
Save this for your first sync.

2/6
In library
Like Play: ready to go.

3/6
Working
Like Cue: downloading or retrying.

4/6
Waiting on you
Needs review, a candidate to review, awaiting review.

5/6
Not found
Nothing good enough yet. The daily sweep keeps looking.

Every light green.
Progress fills segment by segment.

CAPTION

Seeker borrows the booth's language: green is ready, amber is working, a ring is waiting on you, red is missing. Save this for your first sync. Which light do you see most?

Carousel 3 · Buy what you play

6 SLIDES · FRI 11 DEC · JOB: VALUES

Word for word from the app's own Support page. It answers "is this piracy?" before it's asked, and it's the post you can link when it is.

Seeker helps you find music.
It pays the people who made it nothing. You can.

2/6
Buy the tracks you play out
On Bandcamp, on Beatport, or straight from the label.

3/6
Go to their shows
A ticket goes further than a stream ever will.

4/6
Wear the merch. Buy the record.

5/6
Credit them
Tag the artist when you post a set, and answer the "track ID?" question.

Share back
Soulseek works because people share. Seeker's Sharing page makes it opt-in.

CAPTION

Every set you play is built on someone's late nights in the studio. Keep them in it. Send this to a DJ friend.

Answering "isn't this piracy?"

Calmly, once, with a link: "Seeker is a library tool. What you download and share is your call and your responsibility, and it depends on where you live. I buy what I play, and the app says so too." Then link Carousel 3. Never argue in the comments; hide abuse, answer honest questions.

Carousel 4 · How Seeker picks the best copy

7 SLIDES · FRI 18 DEC · JOB: SAVES

The ranking from `soulseek/quality.py`, in plain words: quality tier, then bitrate, then a file you can actually get, then the shorter queue.

The first result isn't the best one.
Here's how Seeker chooses.

2/7
1 · Lossless first
FLAC, WAV and AIFF beat MP3 and M4A.

3/7
2 · Then bitrate
Within a tier, the higher bitrate wins.

4/7
3 · Then one you can get now
Not locked by the peer; then the shorter queue.

5/7
Only DJ formats
MP3, FLAC, WAV, AIFF, M4A: what DJ software reads.

6/7
Three backups
Waiting behind your pick, in case it fails.

A better copy later?
It waits as an Upgrade. You decide.

CAPTION

Not the first result: the best one. This is the order Seeker ranks Soulseek results in, and why it sometimes waits for a better copy. Save it. FLAC, AIFF or 320? Tell me what you play out.

Carousel 5 · Is your library gig-ready?

8 SLIDES · WED 23 DEC · OPTIONAL · JOB: SAVES

A checklist for New Year's Eve prep: useful without Seeker, and every check points at the feature that does it.

Is your library gig-ready?
Seven checks before NYE.

☐ **Every track on disk**
Dashboard: all green.

☐ **The right tags**
Library → Tag playlist.

☐ **Cover art**
Fix missing cover art.

☐ **Clean names**
Rename → Artist – Title.

☐ **No duplicates**
Duplicates, by sound.

☐ **Best quality**
Accept your upgrades.

☐ **Backed up**
That one's on you: a second drive.

CAPTION

Seven checks before New Year's Eve. Six of them Seeker does for you; the seventh is a second drive. Send it to your b2b partner.

One more, when there's demand

"What you need" (with Windows)
When v0.3.0 ships: one slide per requirement, Windows and Mac side by side. Pin it during the Windows wave.

"Seeker in numbers"
For the developer crowd and LinkedIn: 51 days, 951 commits, 2,400+ tests, 94.7 % branch coverage, two audits. It pairs with Reel 1.

SECTION 8 · FILMING

Your home setup is the booth

No club needed. Seeker's whole look comes from the DJ booth (lit buttons, LEDs, meters), so the booth at home is the set. Light it like one and every shot rhymes with the app.

SETUP A

Talking head at the decks

You behind the controller, the camera at eye level, a 35–50 mm (full-frame equivalent) lens at f/2–2.8 so the room falls soft behind you. The decks' LEDs stay in frame.

For: the cold open, intro, outro and every Reel hook.

SETUP B

Desk and laptop

Over your shoulder with the screen in shallow focus, the screen's glow on your face; a second angle top-down on hands and trackpad.

For: moving into screen recordings, reactions, the Reel 6 skit.

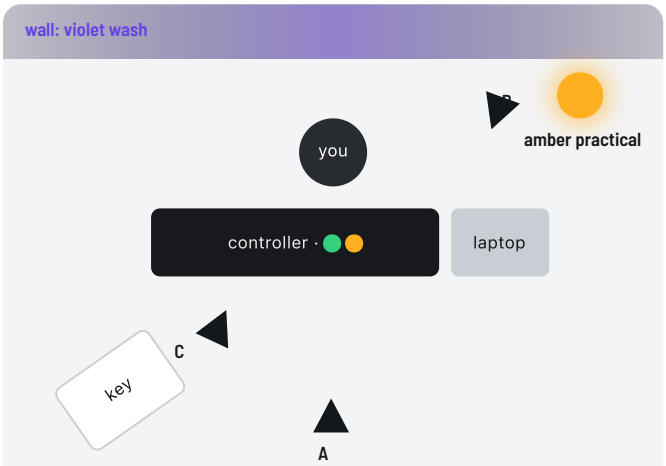

SETUP C

Macros and details

Cue and Play buttons, jog wheel, faders, meters, the USB stick, headphones, Touch ID; f/4–5.6, 50 fps, close.

For: match cuts, Reel 3's rhythm, every pattern interrupt.

The set, from above

key light 45°, soft, above eye line · negative fill opposite

Light in the brand colours

- **Key:** one big soft source (a softbox, or a lamp through diffusion), slightly warm, angled so it doesn't reflect in the laptop screen.
- **Background:** a violet wash on the wall (about #9A7DFF) and one small amber practical (about #FFB020): RGB tubes or smart bulbs.
- **Keep the room dark** so the deck LEDs and the screen read. Night scenes: a practical lamp and the screen only.
- Haze makes the light visible, and also sets off smoke alarms.

Camera (your friend leads)

- **4K UHD at 25 fps, shutter 1/50.** Europe's mains run at 50 Hz: 25 fps keeps lights and screens from flickering.
- **Slow motion:** 50 fps at 1/100, conformed to 25 for 2× slow.
- **White balance fixed** per setup in Kelvin, never auto; focus manual, or face and eye tracking for A.
- **ISO as low as the light allows.** A flat or log profile only if you'll grade it (a colour space transform in Resolve); otherwise neutral, sharpening down.
- **Filming a screen:** expose for the screen, shoot slightly off-axis against moiré, or replace the screen in post with the recording (Fusion's planar tracker).
- **Shoot 4K even for a 1080p delivery:** it leaves room to punch in.

Sound

- **A clip-on wireless mic** on you, or a shotgun just out of frame; a backup track on the camera.
- **Decks and speakers off while you talk.** No music in the dialogue means clean edits and no copyright in the raw footage. Music goes in during the edit.
- **30 seconds of room tone** per setup; a clap at the start of each take for sync.
- **Voice-over separately,** in the quietest, softest room (a wardrobe full of clothes works), 10–15 cm from the mic, the same mic every session.

B-roll shot list

#	SHOT	FOR	NOTES
1	Wide of the setup, lights on	Guide intro, R1, R2	A slow push-in on a slider or gimbal
2	Headphones off, turn to camera	R1, R2 hooks	Three takes
3	Finger on Cue (amber), then Play (green)	R2, R3	Macro, 50 fps, dark room
4	Jog wheel spin, fader up, EQ turn	Pattern interrupts	50 fps
5	USB stick into the deck or laptop	Cold open, R2, R6	Macro
6	Over the shoulder, Seeker on screen	Transitions	Rack focus from deck to screen
7	Screen glow on your face at night	R1, R6	Practical lamp only
8	Hands on keys and trackpad, top-down	Everywhere	Clean desk
9	The phone with the promoter's message	R6 hook	A staged chat
10	Thumb on Touch ID	R5	Macro, soft light
11	Hand swipe across the lens	R4	Close and fast
12	Mixer meters bouncing	Match cut to the amber meter	Cleared music only
13	Facepalm, nod, satisfied grin	R6, the guide	Two of each
14	Hand on the light switch, room dark	R6 ending	Hold 2 s after
15	Portraits for thumbnails and covers	Section 5	About 20 frames, varied expressions

Ideas that make it look designed

- **LED match cuts.** The deck's green Play becomes Seeker's green "In library"; the mixer's meter becomes the amber download meter. Frame both in the same spot.
- **The push-in.** The camera pushes into the laptop screen; cut to the crisp recording at the same framing.
- **Practical wipes.** A hand, a record sleeve or headphones passing the lens hide every cut you need.
- **Rack focus.** Deck LEDs sharp in front, the laptop soft behind, then the other way round.
- **The eyes, hidden.** A sticker of the Seeker icon on the controller or the laptop lid: a recurring Easter egg viewers start to spot.
- **Night to morning.** A time-lapse of the room with the laptop open, for the daily sweep.

Screen recording

- **In the demo account** (section 2), with Seeker at its default 1280×820 window, the size the screenshots use, centred and the same size in every take.
- **macOS's Screenshot app** (⇧⌘5) → Record Selected Portion, with Options → Show Mouse Clicks. Or OBS at 60 fps for smoother motion; Screen Studio (paid) adds automatic zooms.
- **Record at Retina resolution:** twice the pixels means sharp punch-ins later.
- **Dark theme** for the brand look; one take of the theme switch.
- **Clean stage:** Dock and desktop icons hidden, a graphite wallpaper, a Focus mode on, a tidy menu bar, a clean browser profile for Spotify's pages.
- **Move slowly.** Pause a second before each click, never scroll fast, hold still two seconds at the start and end.
- **One file per step,** named by chapter: `YT_ch07_download_T02.mov`. Record waits in full; the edit speeds them up.
- **Pre-stage the states** from the demo crate, so Review, Upgrades and Duplicates have something to show.

Shoot day · Saturday 14 November

One day for every piece with a camera in it. The screen recordings happen on separate evenings: Kris alone, two or three sessions, chapter by chapter.

TIME	BLOCK	LENGTH
09:30	**Set up:** lights, sound check, a test clip reviewed on a big screen	60 min
10:30	**A-roll for the guide:** cold open, intro, outro, the chapter lines to camera	90 min
12:00	**Break**, and check the morning's footage: focus, sound, light	45 min
12:45	**A-roll for Reels:** the hooks for R1, R2, R4, R5 and R6, two takes each, plus the second hooks	60 min
13:45	**B-roll:** the macro and detail list (overleaf)	60 min
14:45	**Night look:** switch the lighting; the Reel 6 skit and the screen-glow shots	45 min
15:30	**Portraits** for thumbnails and covers	30 min
16:00	**Wrap:** copy the cards to the SSD and the backup; log the good takes in the tracker	30 min

The night before

- [ ] The script's bullet points printed; the shot list on the tracker.
- [ ] Batteries charged and cards formatted, with a spare of each.
- [ ] The demo account ready: playlists loaded, the demo crate in place.
- [ ] Wardrobe: solid dark colours, no logos, no fine stripes (they shimmer on camera), and a second top.
- [ ] Phones on Do Not Disturb; water and food in the room.

Kit list

ITEM	MUST HAVE	NICE TO HAVE
Camera	Your friend's mirrorless, 4K at 25p	A second body, or a phone for angle B and behind-the-scenes
Lenses	A fast 35 or 50 mm	A macro lens for buttons and LEDs
Support	Two tripods	A slider or gimbal for push-ins
Light	One soft key: an LED panel with a softbox	Two RGB tubes or smart bulbs, violet and amber
Sound	A wireless clip-on mic	A shotgun on a stand; a quiet corner for voice-over
Storage	A 1–2 TB SSD you share, plus a backup drive	A second backup somewhere else
Other	Spare batteries and cards, gaffer tape	An ND filter if you shoot near a window

On camera, for Kris

Know the points, not the words.

Bullet cards for the talking parts; a phone teleprompter app only for long, exact lines like the requirements.

- **Three takes of every line**, each a little different. The edit picks.
- **Energy at 120 % of normal:** it reads as 100 % on camera.
- **Look into the lens**, not at the screen or your friend. Smile on the first and the last line.
- **A beat of silence** before and after each sentence: those are the edit points.
- **Short sentences.** If a line needs a breath in the middle, it's two lines.
- **Hands:** hold something (the USB stick, the headphones) or rest them on the controller.
- **Mess up?** Pause, then restart the sentence, not the paragraph.
- **Your friend directs:** one note at a time, after the take, never during.

Film the behind-the-scenes too

A phone on a stand catching the set-up, the bloopers and the two of you working: a week of Stories and one honest "how we made it" Reel later.

Photo kit, video habits

A photographer's camera does all of this; the differences are habits: a fixed 1/50 shutter, continuous light instead of flash, sound recorded separately, and 30-minute clip limits or overheating on some bodies (test a long take first).

Get permissions in writing

For every track you didn't make, a written yes from the artist (a message is fine), saved in the tracker card. The same for anyone else who appears on camera.

SECTION 9 · EDITING IN DAVINCI RESOLVE

Cut, grade, mix, deliver: one app

Resolve covers all of it: the edit, motion graphics (Fusion), colour, sound (Fairlight) and export. The free version is enough for this plan; a few AI features, automatic transcription among them, need Resolve Studio.

The workflow, in order

String-out → Assembly → Rough cut → B-roll pass → Graphics → Colour → Sound → Captions → Review copy → Fixes → Final

> **No polish before the rough cut is approved**
> Colour, graphics and sound on a cut that will still change is time thrown away. Watch the rough cut together, agree on it, then finish.

Project setup

- **One template project:** bins, timeline settings, render presets and the graphics kit. Duplicate it for each deliverable.
- **The guide:** 3840×2160 at 25 fps. **Reels:** a 1080×1920 timeline in the same project (uncheck "use project settings"), so clips are shared.
- **Bins:** 01 A-roll · 02 B-roll · 03 Screen · 04 Voice · 05 Music & SFX · 06 Graphics · 07 Stills · 08 Exports.
- **Proxies** (Generate Proxy Media) if 4K camera files stutter on either Mac.
- **Install Barlow Semi Condensed** from `packaging/fonts/` on both Macs before you build a single title.

The graphics kit, in Fusion

- Build the pieces listed in section 5 once, save them as Fusion macros or Effects templates in a shared folder, and use them in the guide and the Reels alike.
- Motion like the app: crisp and short (6–8 frame eases), no bounce. Colours from Appendix A, LED dots for states, the brows as the recurring flourish.
- The logo sting: the eyes open (scale up from a line, a slight overshoot), the pupils catch the light, the brows drop in; 1.2 seconds.

Colour (your friend leads)

- **Node order:** input (a colour space transform if you shot log) → balance (white balance, exposure) → contrast → look → output.
- **Match before you style:** make all of one scene's shots agree, using stills from the gallery side by side.
- **The look:** graphite neutrals, slightly cool shadows, the amber practicals warm in the highlights; protect skin tones with a qualifier.
- **Don't grade the screen recordings.** The app's green, amber and red must stay exactly as Seeker draws them; only keep levels legal.
- **Exports can look lighter on a Mac** than in Resolve's viewer: a known Rec.709 gamma-tagging mismatch. Judge the final look on the uploaded video, on a phone and a laptop, before you publish.

Editing ideas that fit Seeker

- Speed ramps into time-lapses on every wait.
- A freeze-frame and a callout the moment a light changes colour.
- Before/after splits with a wipe on the beat.
- The pipeline tracker filling up, chapter by chapter.
- Kinetic numbers in Barlow: 51 days, 951 commits, the megabytes reclaimed.

One track layout, in every timeline

V5	Captions (Reels), burned-in text
V4	Pipeline tracker, lower thirds, chapter cards
V3	Callouts, blur, badges
V2	B-roll and cutaways
V1	Screen recordings and A-roll: the story

A1	Voice: voice-over and on-camera lines
A2	Camera sound, muted unless used
A3	Music
A4	Effects, Foley, the sonic logo

Same tracks everywhere: either of you can open the other's timeline and know where everything is.

Sound, in Fairlight

- **Voice:** a high-pass around 80 Hz, a gentle EQ, a compressor, a de-esser; noise reduction only if you can hear the noise.
- **Music under voice:** about 20 dB below it, ducked automatically with a sidechain compressor or drawn by hand.
- **Sound design:** soft clicks on callouts, a quiet whoosh on transitions, your own deck's cue click when a light turns green.
- **A sonic logo:** one or two seconds made on your own gear (a filter sweep into a cue click and a chord, say), at the end of every video and Reel. Nobody else can have it.
- **Loudness:** –14 LUFS integrated, true peak –1 dBTP, the common target for YouTube and Instagram. Fairlight's loudness meter shows both.

Captions

- **YouTube:** upload an `.srt` as closed captions: better accessibility, and YouTube can read it.
- **Reels:** burned in, two to four words at a time, centred in the safe zone, Barlow SemiBold in white with a dark shadow, the current word in violet or amber.
- **The free route:** transcribe locally with Whisper (mlx-whisper or whisper.cpp run well on Apple silicon) → `.srt` → File → Import → Subtitle in Resolve → style the track.
- **Proofread the names:** Seeker, slskd, Soulseek, Camelot, rekordbox.

Export presets

PRESET	FORMAT	PICTURE	AUDIO
Guide master	H.264 or H.265	3840×2160, 25p, about 45 Mbps	AAC 320k, 48 kHz
Reel / Short	H.264	1080×1920, 25p, about 16 Mbps	AAC 320k
Review copy	H.264	1920×1080, about 8 Mbps, timecode burned in	AAC 192k
Thumbnail	JPG or PNG	1280×720	—
Carousel slide	PNG	1080×1350	—

Burn timecode into review copies (Workspace → Data Burn-In), so a note can say "04:12, cut the pause" and mean one exact frame.

Thumbnails and covers

- **Photograph them on the shoot day**, your friend's home ground: an expressive face, clean light, space on one side for the words.
- **Composite at 1280×720** in Photoshop, Affinity, Figma or Canva: a graphite ground, LED rows, three words at most in Barlow, the eyes in the same corner every time.
- **Check at phone size** (160 px wide) and in both YouTube themes before you upload.
- **Make three** for Test & Compare, if the channel has it.
- **Reel covers** come from the same photos: 1080×1920 with the title in the 3:4 middle band.

> **A review session that works**
>
> Watch the review copy together, start to finish, without stopping. Then go back and leave each note as a timecode and one sentence. Fix in a batch, export once more, done.

Reels: cut to the music

- Lay the music down first. Play it and tap **M** on every beat to drop markers; snap the cuts to them.
- Edit the middle first and the first second last: once the Reel works, find its strongest frame and open on it.
- Before publishing, watch it on a phone, sound off. If it doesn't make sense like that, the captions aren't finished.

Shortcuts worth learning on day one

- **J K L** play backwards, stop, play forwards (tap twice for speed); **I** and **O** mark in and out.
- **⌘B** splits at the playhead; **M** adds a marker; **⇧Z** fits the timeline to the window.
- The **Cut page** is fastest for string-outs and Reels; the **Edit page** for the guide's layered timeline.

SECTION 10 · SCRIPT TOOLKIT

Lines worth stealing from yourself

The hooks, the lines that repeat until they become the brand, and short answers to the questions every comment section will ask.

Hooks bank

HOOK	KIND	USED IN
“Spotify’s back in your DJ software. You still can’t play it at your gig.”	contrarian	R2, the guide’s description
“Your set’s a Spotify playlist. Your USB stick is empty.”	problem	R2’s second hook
“I spent 51 days building the app I wanted as a DJ.”	story	R1
“Watch this playlist go green.”	curiosity	R3
“Your DJ software deserves better than track01 (1).mp3.”	problem	R4
“Same song. Three names.”	curiosity	R5
“23:47. Gig’s tomorrow.”	story	R6
“The first result isn’t the best copy.”	contrarian	C4; a Short from chapter 7
“Which of these 40 tracks do you already own? Seeker knows.”	value	A Short from chapter 5
“What every light in Seeker means. Save this.”	value	C2
“Seven checks before your NYE set.”	value	C5
“Stop rebuilding playlists by hand.”	value	Stories

Lines that repeat

- **“Every light green.”** The sign-off, at the end of every video.
- **“Dig in Spotify. Play from files.”** The problem, in five words.
- **“Seeker never guesses.”** When it’s unsure, it asks you on Review; when a file’s name is taken, it picks a new one.
- **“Nothing destructive without asking.”** The README’s own words.
- **“Buy what you play.”** The values line.

Pictures that explain it

- **The record-shop clerk** who knows your crate: you hand over the list, they tell you what you already own and find the rest.
- **A CDJ:** green is ready, amber is working, a ring is waiting on you, red is missing.
- **Crate-digging, minus the crates.**

Answers to the usual questions

Is it free?
Yes: free and open source, with no telemetry and no paid tier. Donations are a thank-you; nothing is locked.

Is it legal?
Seeker is a library tool; Soulseek is a file-sharing network. What you download and share is your call and your responsibility, and it depends on where you live. Buy what you play.

Why Spotify Premium and a developer app?
Seeker reads your playlists through Spotify’s Web API with an app you register. Since February 2026 Spotify requires Premium for that, and allows one such app per person.

Why Docker?
Seeker talks to Soulseek through slskd, which runs in Docker. Seeker sets it up and starts it for you.

Windows? Intel?
Intel Macs come next (v0.2.0), then Windows (v0.3.0). Follow to hear first.

Does it work with rekordbox, Serato, Traktor?
It writes standard tags, cover art, BPM and key into the files, and your DJ software reads them when it imports. It never touches their databases.

Will it mess up my library?
It never overwrites: a file whose name is taken gets a numbered one. Renames, replacements and deletions happen only after a preview or a confirmation.

Does it upload anything?
No. Everything stays on your Mac; sharing on Soulseek is off until you pick a folder to share.

Why does macOS block it?
It’s ad-hoc signed, not notarized. Approve it once: System Settings → Privacy & Security → Open Anyway.

Can I use it without Soulseek?
Yes. Sync, matching, Review, tags, renames and duplicates all work; buy the missing tracks, and Seeker matches them on the next scan.

SECTION 11 · TEAM AND TOOLS

Two people, one board

You asked what to track the work in. The answer is the tool your friend will actually open: one shared place for the plan, the scripts and the status of every piece.

PLAN AND TRACK

Notion

The board, the calendar, the scripts and shot lists, in one place. Free.

REVIEW CUTS

Frame.io, or an unlisted upload

Notes pinned to an exact frame. Both free.

MOVE FOOTAGE

One shared SSD

Plus a backup drive. 4K footage is too big to sync through the cloud.

Why Notion

- **One database, many views:** a board by status for the daily work, a calendar by publish date for the plan, a table for the numbers.
- **Every card is a page:** the script, the shot list, the caption and the links live inside the piece they belong to.
- **Templates:** make one Reel card and one carousel card with the checklist inside, then start every new piece from them.
- **Stay on the free plan by inviting your friend as a guest,** not a member: the free plan allows up to ten guests, while a second member puts the workspace on a limited block trial. Check notion.so/pricing before you set it up.

The board's columns

Ideas → Scripting → Pre-production → Shooting → Editing → In review → Ready → Scheduled → Published → Learned

"Learned" is where a card goes once its seven-day numbers are in and you've written one sentence about why it did what it did.

Other good options

Trello	The simplest board there is; free for small teams. Weaker for scripts and calendars.
GitHub Projects	Free, and you live in GitHub already. Your friend doesn't, and that matters more.
Milanote	Lovely for moodboards and storyboards; the free tier is small. A partner to the board, not a replacement.

What each card holds

PROPERTY	WHY
Format (guide, Reel, carousel, Story, Short)	Filter by platform
Status	The board's columns
Owner	Who moves it next
Publish date	The calendar view
Pillar	Keeps the mix honest (section 6)
Hook	Written before anything else
Script, shot list	Inside the card
Footage path, review link	No hunting for files
Music and its licence	Rule 4, and a saved permission
Results after seven days	Section 12's numbers

Done means all of these

- [ ] Script approved by both of you
- [ ] Shot, edited, graded, mixed
- [ ] Captions burned in, or an `.srt` uploaded
- [ ] Cover or thumbnail; caption or description written
- [ ] Links tested on a phone
- [ ] Privacy pass: no usernames, keys, emails or home paths
- [ ] Music licence logged
- [ ] Scheduled, and the Shorts copy queued

Who does what

WORK	KRIS	YOUR FRIEND
Scripts, hooks, captions	LEAD	REVIEW
On camera, voice-over	LEAD	DIRECT
Camera, light, B-roll	ASSIST	LEAD
Screen recordings, demo setup, app accuracy	LEAD	—
Edit: the guide	LEAD story, screen	LEAD colour, finish
Edit: Reels	SPLIT	SPLIT
Thumbnails, covers, carousels	WORDS, FACTS	LEAD photos, design
Publishing, replies, numbers	LEAD	SUPPORT

Split the Reels by taste: each of you owns three, start to finish, and reviews the other's. You learn each other's style faster that way than by passing one timeline back and forth.

The week

Mon	**20 minutes:** move the cards, pick the week's pieces, assign owners.
Midweek	**Make:** shoot and edit blocks, alone or together.
Thu	**Review:** watch the week's cuts together; notes as timecodes.
Fri	**Ship:** schedule posts (the Instagram app or Meta Business Suite; YouTube Studio); 15 minutes of numbers after launch.

Reviewing a cut

- **Frame.io's free plan** holds two members, two projects and 2 GB (at the time of writing): enough for compressed review copies, with comments pinned to frames. Its current version reportedly doesn't connect to Resolve, so copy the notes in as markers.
- **Or upload unlisted to YouTube** and write timestamped notes in the card. Free, unlimited, and it shows you the cut the way viewers will see it.
- Either way: the timecode burned into the review copy (section 9), one note per line.

Files and names

```
Seeker-Content/          (the shared SSD)
  00_Admin/       permissions, licences, brand kit
  01_Scripts/
  02_Footage/     261114_shoot/  A-cam/  B-cam/  Audio/
  03_Screen/      YT_ch01 … YT_ch16, R3, R4 …
  04_Graphics/    Fusion macros, logo, fonts
  05_Music_SFX/
  06_Projects/    Resolve project backups (.drp)
  07_Exports/     review/  final/  thumbs/  carousels/
```

- **Footage:** `YYMMDD_piece_shot_take`, e.g. `261114_R2_hook_T03.mov`.
- **Exports:** `Seeker_R2_v03_review.mp4`; the final drops "review".
- **Back up after every shoot** to a second drive, before the cards are formatted again.
- **Small files** (scripts, graphics, thumbnails, `.srt`) in a shared Google Drive or iCloud folder too, so they work from anywhere.

Week 1, card by card · 2–8 November

#	CARD	OWNER	BY
1	Notion: the board, the two card templates; your friend invited as a guest	Kris	Mon
2	Claim the handle on YouTube, Instagram and TikTok; set up both profiles (section 4); verify YouTube by phone	Kris	Mon
3	Requirements fixed: Premium in the README, the wizard and seekerapp.dev; the site's version label	Kris	Tue
4	The demo macOS account, demo crate, demo playlists and demo Soulseek username (section 2)	Kris	Wed
5	A moodboard: the look, the light, the covers, from this plan's colours	Your friend	Wed
6	Script v1 of the guide (two columns) and of the six Reels	Kris	Thu
7	Kit check: lights, mic, SSD; a 30-minute test take for overheating	Your friend	Thu
8	Music shortlist with licences; the sonic logo sketched on your gear	Both	Fri
9	The graphics kit started in Fusion: lower third, callout, chapter card	Your friend	Sun
10	Read every script aloud together; lock the shoot-day plan for Saturday 14 November	Both	Sun

SECTION 12 · MEASURE AND ADJUST

Fifteen minutes on Fridays

Measure to decide, not to feel good or bad. Each number below answers a question, and each question has an action attached.

The baseline, 30 October 2026

30
`Seeker.dmg` downloads: 29 of v0.1.0, 1 of v0.1.1

0
GitHub stars

9
repo views in 14 days, all referred by seekerapp.dev

0
followers: new channels start here, and that's fine

The weekly scorecard

NUMBER	THE QUESTION IT ANSWERS
YouTube Studio	
Impressions click-through rate	Do the thumbnail and title work? (YouTube says half of all channels sit between 2 % and 10 %.)
Average percentage viewed	Does the guide hold people?
Retention graph	Which chapter loses them?
Traffic sources	Is search starting to find it?
Instagram Insights	
Reach, and the share from non-followers	Are Reels finding strangers?
Average watch time against length	Does the middle hold?
Shares and saves	Is it useful? The strongest signal there is.
Profile visits → link taps	Are people curious enough to click?
Seeker	
`.dmg` downloads a week	Is any of it turning into users?
Stars, issues, donations	Are users turning into fans?

If this, then that

🔴 A Reel's reach is low	The first second failed: a new hook and cover, tested as a Trial Reel.
🟡 Reach is good, watch time low	The middle drags: cut harder next time.
🟢 Saves are high	Make more reference pieces like it.
🔴 The guide's click-through is low after a week	Swap the thumbnail first, then the title.
🟡 Retention falls off a cliff at one chapter	Trim it in YouTube Studio's editor, or give it a short video of its own.
🟠 The same question three times	Pinned comment, FAQ Highlight, maybe a Short.
🟠 "Windows?" keeps coming up	Count it: that's phase 02's demand, in writing.

Getting Seeker's numbers

```
# .dmg downloads, per release
gh api repos/KristiyanDDimitrov/Seeker/releases --jq \
 '.[] | {tag: .tag_name, dmg: ([.assets[]
  | select(.name == "Seeker.dmg") | .download_count] |
add)}'

# who sent visitors to GitHub (GitHub keeps 14 days: note
it weekly)
gh api
repos/KristiyanDDimitrov/Seeker/traffic/popular/referrers
```

seekerapp.dev has no analytics: your call

The tagged links (`?ref=youtube` , `?ref=instagram`) only pay off with a counter. A cookie-free one (GoatCounter, Plausible, Cloudflare Web Analytics) tracks visits without tracking people, in keeping with "no telemetry". Without it, the `.dmg` count and GitHub's referrers are your conversion numbers.

SECTION 13 · BEYOND THE TWO CHANNELS

Owned, rented, borrowed

YouTube and Instagram are rented: their rules, their reach. A launch also needs places you own, and other people's audiences you borrow, carefully.

OWNED · YOURS TO KEEP

- **seekerapp.dev:** embed the guide at the top, link both channels, fix the version label and the requirements.
- **The README:** a "Watch the guide" link and thumbnail at the top.
- **Release notes:** every release links the guide and the newest Reel.
- **The app:** Help → "Video guide" in the next release.
- **hello@seekerapp.dev:** the one contact address everywhere.

RENTED · THIS PLAN

- **YouTube:** the guide, then Shorts.
- **Instagram:** Reels, carousels, Stories.
- **TikTok:** the same vertical files, if you have the energy; claim the handle either way.
- **LinkedIn:** Reel 1 and the "in numbers" carousel, for the developer side of your story.

BORROWED · EARN IT

- Communities where your audience already talks.
- People with audiences who might care.
- Your own scene, in person.

Details below. Read every community's rules first: many ban self-promotion or any talk of downloading.

Borrowed reach, one by one

WHERE	ANGLE	HOW
r/DJs, r/Beatmatch, r/rekordbox	The library problem and the guide	Only where the rules allow makers to post. Say you made it, lead with the problem, answer every comment for a day.
r/selfhosted	slskd in Docker with a real desktop app over it	The tinkerer angle (section 1): the Docker setup, the CLI, the open source.
r/macapps	A native-feeling, free Mac app for DJs	Screenshots and the guide; mention "not notarized" up front.
Hacker News: Show HN	The build story: 51 days, 2,400+ tests, Qt and Python	Link the repo; the README and the interview-reference numbers do the talking. A weekday morning, US time.
The slskd project	A desktop front end for their daemon	Its GitHub discussions, respectfully: say what you built on top of their work.
Five DJ friends	Early users	Ask each for a 15-second honest reaction video: Stories material and testimonials, with their permission.
DJ blogs and newsletters	A free tool for a common problem	A short pitch with the guide link, once it has a few hundred views and some comments.
Your next gig	"The app I built"	An eyes sticker on your controller starts the conversation for you.

APPENDIX A

Specs and brand kit

Everything your friend needs to make a frame look like Seeker, and every size the platforms expect.

Colours, from the app's own theme

Graphite
#101113 · covers, sidebar

Ground
#17191C · backgrounds

Surface
#1E2125 · cards, panels

Text
#E8EAEC · on dark

Muted
#A0A7AE · secondary text

Violet
#9A7DFF · the accent on dark

Violet ink
#6440E6 · the accent on light

Green
#35D07F · in library

Amber
#FFB020 · working, cue

Red
#FF6363 · not found

Type

Barlow Semi Condensed, Medium and SemiBold, for titles and numbers: the app's panel lettering. A Google Font, so Figma and Canva have it; the files are in `packaging/fonts/` (OFL). Body text: the system font (SF Pro).

The mark

The icon's eyes and brows: `packaging/icons/seeker_icon.icns` (export a PNG with `sips -s format png`) and `seeker_brows.svg` . The wordmark is "Seeker" in Barlow SemiBold with the brows over the "ee".

Rules

The icon on graphite only; never recolour the eyes. One accent colour per frame. Green, amber and red only ever mean a state, never decoration. Motion is crisp and short.

Sizes

WHERE	WHAT	SIZE	NOTES
YouTube	The guide	3840×2160 or 1920×1080, 16:9, 25 fps	Over 15 minutes needs a verified channel; you'll verify anyway
YouTube	Thumbnail	1280×720	JPG or PNG; Studio shows the current file-size limit
YouTube	Banner	2560×1440	Everything important inside the central 1546×423
YouTube	Profile picture	800×800	Shown as a circle
YouTube	Chapters	—	Start at 00:00; at least three; each ten seconds or longer
YouTube	Shorts	1080×1920	Up to three minutes; set the Related video to the guide
Instagram	Reel and its cover	1080×1920	Safe zone in section 6; the cover's title inside the middle 3:4
Instagram	Carousel	1080×1350 (4:5)	Up to 20 slides; the profile grid shows a 3:4 crop
Instagram	Story	1080×1920	Keep about 250 px clear at the top and the bottom
Instagram	Profile picture	320×320	Shown as a small circle: the eyes, centred
Both	Sound	AAC, 48 kHz	−14 LUFS integrated, −1 dBTP true peak

APPENDIX B

Checklists and sources

Before any Reel or carousel

- [ ] The hook lands in the first second
- [ ] Captions burned in, or alt text on every slide
- [ ] Text inside the safe zone
- [ ] A cover chosen for the 3:4 grid
- [ ] Caption: the hook again, a call to action, 3–5 hashtags
- [ ] Music licence logged
- [ ] Privacy pass: no usernames, keys, emails, home paths
- [ ] The Shorts copy queued, Related video set

Before the guide goes public

- [ ] Watched once more, start to finish, on a phone
- [ ] Three thumbnails ready; the title chosen
- [ ] Description: links tagged (`?ref=youtube`), requirements with Premium, chapters
- [ ] `.srt` uploaded and proofread
- [ ] End screen and the pinned comment ready
- [ ] seekerapp.dev and the README updated to embed and link it

Every week after launch

- [ ] Every comment answered
- [ ] The scorecard filled in; GitHub's referrers noted (14-day window)
- [ ] Cards moved to Learned, with one sentence each
- [ ] Next week's pieces picked and owned
- [ ] One Story with a poll or a question box
